

Euthanasia: Physician-Assisted Suicide, Disability, and Paternalism

Topic: Health & Medicine | Words: 962 | Pages: 3

Voluntary euthanasia can be defined as a case when the person wants to die and requires assistance. Involuntary euthanasia, on the other hand, means that such a person would prefer to live but has a condition that would cause their death eventually, and the suffering from this condition cannot be alleviated. Murder can be defined as one person causing death to another, which is not provoked by a medical condition or the latter's request. Execution is completed by the authorities as a result of a court's sentence due to an individual committing a serious crime.

Under the utilitarianism approach, an action is good if it tends to promote happiness and bad if it causes misery or the opposite of happiness. Moreover, this theory considers not just the person's happiness but the happiness of everyone impacted (Singer 5). Thus, this is a moral philosophy that argues for activities that promote happiness or pleasure while opposing actions that cause misery or harm.

A utilitarian ideology would seek the welfare of society as a whole while making social or political decisions. Hence, with utilitarianism, euthanasia would be considered bad since, although the person requesting it might be happy that their wish is fulfilled, their friend, family, and loved ones will feel miserable. Legalization would lower the society's happiness as the community would have many cases of euthanasia; therefore, there would be many families affected by the consequences.

medical technology advances and severely injured or ill people can be kept alive and functioning long beyond what was
previously medically possible the debate surrounding the ethics of end of life care and quality of life issues has grown more
urgent In this lucid and vigorous book Craig Paterson discusses assisted suicide and euthanasia from a fully fledged but non
dogmatic secular natural law perspective He rehabilitates and revitalises the natural law approach to moral reasoning by
developing a pluralistic account of just why we are required by practical rationality to respect and not violate key demands
generated by the primary goods of persons especially human life Important issues that shape the moral quality of an action
are explained and analysed intention foresight action omission action consequences killing letting die innocence non

innocence person non person Paterson defends the central normative proposition that it is always a serious moral wrong to intentionally kill an innocent human person whether self or another notwithstanding any further appeal to consequences or motive

Giving Death a Helping Hand Dieter Birnbacher, Edgar Dahl, 2008-01-22 Public policy surrounding the hotly debated issue of physician assisted suicide is examined in detail You ll find an analysis of the current legal standing and practice of physician assisted suicide in several countries Authors discuss the ethical principles underlying its legal and professional regulation Personal narratives provide important first hand accounts from professionals who have been involved in end of life issues for many years

Assisted Death in Europe and America Guenter Lewy, 2010-09-23 Advances in medical treatment now enable physicians to prolong life to a previously unknown extent however in many instances these new techniques mean not the saving of life but prolonging the act of dying In the eyes of many medical technology has run out of control and contributes to unnecessary suffering Hence the demand has arisen that patients should be entitled to choose death when pain and physical and mental deterioration have destroyed the possibility of a dignified and meaningful life and that their doctors should help them to realize this endeavor At the present time there are seven jurisdictions in the world that with various restrictions have legalized the practice of assisted death physician assisted suicide and or voluntary euthanasia to wit the Netherlands Belgium Luxembourg Switzerland in Europe and the states of Oregon Washington and Montana in the United States Four of these regimes in the Netherlands Belgium Switzerland and the state of Oregon have been functioning for many years and we have for them a substantial body of data as well as much observational research This book is based upon this material The literature dealing with the moral legal and social aspects of assisted death is voluminous but there is a paucity of writing that provides a detailed account of the way these four regimes are actually working Many partisans on both sides of the issue cite existing data selectively or at times willfully distort the empirical evidence in order to strengthen their case Based on the documentary record and interviews with officials and scholars this book seeks to give the specialist as well as the general interested reader a reliable picture of the way assisted death functions and to draw relevant lessons While accurate factual information cannot settle a moral debate it nevertheless is a precondition of any well founded argument The author speaks authoritatively about the issues he addresses I think this book does make an important contribution to the field It will be of interest to students and scholars of PAS as a source of information and reference I definitely recommend publication Stuart Youngner Department of Bioethics Case Western Reserve University School of Medicine The information collected here makes an important contribution to the literature on PAS because it collects a broad array of relevant information into a single volume It is interesting and enlightening This will make the book a valuable resource for anyone interested in the subject and an especially useful resource for academics who study or teach about the issues Rosamond Rhodes Director Bioethics Education Mt Sinai School of Medicine
