

About this manual

The purpose of this manual is to present the owner with a concise and graphic guide which will enable him to tackle any operation from basic routine maintenance to a major overhaul. It has been assumed that any work would be undertaken without the luxury of a well-equipped workshop and a range of manufacturer's service tools.

To this end, the machine featured in the manual was stripped and rebuilt in our own workshop, by a team comprising a mechanic, a photographer and the author. The resulting photographic sequence depicts events as they took place, the hands shown being those of the author and the mechanic.

The use of specialised, and expensive, service tools was avoided unless their use was considered to be essential due to risk of breakage or injury. There is usually some way of improvising a method of removing a stubborn component, providing that a suitable degree of care is exercised.

The author learnt his motorcycle mechanics over a number of years, faced with the same difficulties and using similar facilities to those encountered by most owners. It is hoped that this practical experience can be passed on through the pages of this manual.

Where possible, a well-used example of the machine is chosen for the workshop project, as this highlights any areas which might be particularly prone to giving rise to problems. In this way, any such difficulties are encountered and resolved before the text is written, and the techniques used to deal with them can be incorporated in the relevant section. Armed with a working knowledge of the machine, the

author undertakes a considerable amount of research in order that the maximum amount of data can be included in the manual.

A comprehensive section, preceding the main part of the manual, describes procedures for carrying out the routine maintenance of the machine at intervals of time and mileage. This section is included particularly for those owners who wish to ensure the efficient day-to-day running of their motorcycle, but who choose not to undertake overhaul or renovation work.

Each Chapter is divided into numbered sections. Within these sections are numbered paragraphs. Cross reference throughout the manual is quite straightforward and logical. When reference is made 'See Section 6.10' it means Section 6, paragraph 10 in the same Chapter. If another Chapter were intended, the reference would read, for example, 'See Chapter 2, Section 6.10'. All the photographs are captioned with a section/paragraph number to which they refer and are relevant to the Chapter text adjacent.

Figures (usually line illustrations) appear in a logical but numerical order, within a given Chapter. Fig. 1.1 therefore refers to the first figure in Chapter 1.

Left-hand and right-hand descriptions of the machines and their components refer to the left and right of a given machine when the rider is seated normally.

Motorcycle manufacturers continually make changes to specifications and recommendations, and these, when notified, are incorporated into our manuals at the earliest opportunity.

Introduction to the BMW K100 and 75 models

After nearly sixty years of producing flat twin engined machines of very high quality but basically simple specification, BMW gave the motorcycling world something of a shock when the K100 was first announced late in 1983. At first glance it seemed the complete opposite of all those qualities that the company had previously found so important in a motorcycle, but on closer inspection it becomes obvious that great efforts have been made to make the machines as light, simple, and compact as possible and yet attractive to the modern motorcyclist. The design is intended to provide a sound basis for a long-running production, taking into account all current and pending noise and emission control legislation.

Research started in the mid-1970s into a replacement for the flat twin engines which are already approaching the limits of reasonable development. A breakthrough came in 1978 with the patenting of the basic idea of taking a car engine, laying it on its side and transmitting the drive through a secondary output shaft. This provides a low centre of gravity and a very distinctive appearance, as well as the basis for a short compact engine/transmission unit. The transmission is very similar in layout to that used on the twins but is totally redesigned, using lightweight materials wherever possible, with emphasis on keeping it as short and as compact as possible. The tubular spine type frame is bolted to the unit and carries a pair of conventional telescopic forks to provide steering and front suspension.

After the introduction of the K100 and K100 RS in late 1983, followed by the K100 RT in 1984 the machines suffered one or two

teething troubles, as is inevitable with any brand-new design, which were soon rectified by the introduction of modified components. In addition to this, one or two modifications have been made to cure problems which became evident in service; notably to reduce vibration and the build-up of heat under the fuel tank.

When the 750cc models were introduced, starting with the K75 C in late 1985, the opportunity was taken to modify many 100-model components to take advantage of commonality of parts; BMW claim approximately 70% of the components are common to both models. The development of the smaller machines proceeded alongside the 100 models but introduction was delayed until 1985/86, as a result the 75 models incorporate all the lessons learned from the earlier 100 models.

In common with their policy in previous years, BMW introduced various forms of each basic model to cater for as many tastes as possible. Thus the basic K100 was followed by the sports/touring K100 RS, the touring K100 RT and the fully-equipped K100 LT tourer. The first 75 model was the K75 C, which was followed by the more sports-orientated K75 S and then the basic K75. In all cases (except for final drive ratios, the sports suspension on the K75 S and the rear wheel and brake on the K75 and K75 C) the basic machine is exactly the same. **Note:** To avoid confusion with the basic K75 and K100 models, machines are referred to throughout the manual as '75' models or '100' models, except where a more precise definition is required.
