Van Lanen, 2022-09-29 In the nineteenth century most American farms had a small orchard or at least a few fruit bearing trees People grew their own apple trees or purchased apples grown within a few hundred miles of their homes Nowadays in contrast Americans buy mass produced fruit in supermarkets and roughly 70 percent of apples come from Washington State So how did Washington become the leading producer of America's most popular fruit In this enlightening book Amanda L Van Lanen offers a comprehensive response to this question by tracing the origins evolution and environmental consequences of the state's apple industry Washington's success in producing apples was not a happy accident of nature according to Van Lanen Apples are not native to Washington any more than potatoes are to Idaho or peaches to Georgia In fact Washington apple farmers were late to the game lagging their eastern competitors The author outlines the numerous challenges early Washington entrepreneurs faced in such areas as irrigation transportation and labor Eventually with crucial help from railroads

Washington farmers transformed themselves into growers by embracing new technologies and marketing strategies By the 1920s the state s growers managed not only to innovate the industry but to dominate it Industrial agriculture has its fair share of problems involving the environment consumers and growers themselves In the quest to create the perfect apple early growers did not question the long term environmental effects of chemical sprays Since the late twentieth century consumers have increasingly questioned the environmental safety of industrial apple production Today as this book reveals the apple industry continues to evolve in response to shifting consumer demands and accelerating climate change Yet through it all the Washington apple maintains its iconic status as Washington s most valuable agricultural crop
