Diabetes Victor R Preedy, 2020-04-24 Diabetes: Oxidative Stress and Dietary Antioxidants, Second Edition builds on the success of the first edition, covering updated research on the science of oxidative stress in diabetes and the potentially therapeutic usage of natural antioxidants in the diet and food matrix. The processes within the science of oxidative stress are not described in isolation but rather in concert with other processes such as apoptosis, cell signaling, and receptor mediated responses. This approach recognizes that diseases are often multifactorial and oxidative stress is a single component of this. Since the publication of the first edition, the science of oxidative stress and free radical biology continues to rapidly advance with thousands of research articles on the topic. New sections in this update cover the role of dietary advanced glycation end products (AGEs) in causing OS in diabetes, oxidative stress and diabetes induced bone metabolism, and oxidative stress and diabetic foot ulcer. Saves clinicians and researchers time in quickly accessing the very latest details on a broad range of diabetes and oxidation issues. Combines the science of oxidative stress and the putative therapeutic usage of natural antioxidants in the diet, its food matrix, or plant. Includes preclinical, clinical, and population studies to help endocrinologists, diabetologists, nutritionists, dieticians, and

clinicians map out key areas for research and further clinical recommendations *Appleton & Lange Outline Review*
