

The background of the book cover is a photograph of a coastal landscape. In the upper center, a tree is bent over by the wind, its branches reaching towards the right. The tree is situated on a rocky, grassy hill. The sky is a clear, pale blue. The foreground consists of large, grey, weathered rocks and patches of dry, yellowish-brown grass.

CAMBRIDGE

Adapting To Climate Change Thresholds Values Governance

Stephen Whitfield

Adapting To Climate Change Thresholds Values Governance:

Adapting to Climate Change W. Neil Adger, Irene Lorenzoni, Karen L. O'Brien, 2009-06-25 This book presents the latest science and social science research on whether the world can adapt to climate change **Adapting to Climate Change** W. Neil Adger, Irene Lorenzoni, Karen L. O'Brien, 2009 This presents the latest scientific research by leading researchers and practitioners on the critical issue of adapting to climate change **Adapting Institutions to Climate Change** Great Britain. Royal Commission on Environmental Pollution, 2010 The overwhelming scientific consensus is that the earth is warming because of human activities Adaptation will be necessary even if mitigation efforts are markedly increased because we are already locked in to climate change as a result of historic greenhouse gas emissions Projections show that it is likely that global average temperatures will rise by 2 degrees C and there is the potential for a 4 degree C rise by the end of the century UK projections suggest warmer drier summers and warmer wetter winters The consequences are likely to be profound even devastating with more extreme events floods drought and heat waves coupled with sea level rises Policies and practice on water management coast protection and nature conservation will need to change This report explores how institutions should adapt their policies to a changing climate and offers a ten point check list to be followed by all organisations The Commission found many institutions are poorly prepared to adapt to climate change and many have simply not started to consider it The Commission makes recommendations designed to help institutions develop their capacity to respond to this challenge In contrast to climate change mitigation where local actions have global benefits adaptation is primarily about local action with local consequences that may differ markedly in different parts of the UK *The Politics of Adapting to Climate Change* Leigh Glover, Mikael Granberg, 2020-06-29 This book examines the political themes and policy perspectives related to and influencing climate change adaptation It provides an informed primer on the politics of adaptation a topic largely overlooked in the current scholarship and literature and addresses questions such as why these politics are so important what they mean and what their implications are The book also reviews various political texts on adaptation **Adapting to Climate Uncertainty in African Agriculture** Stephen Whitfield, 2015-08-20 Future climatic and agro ecological changes in Africa are uncertain and associated with high degrees of spatial and temporal variability and this change is differently simulated within divergent climate crop models and in controlled crop breeding stations Furthermore uncertainty emerges in local contexts not just in response to climatic systems but to social economic and political systems and often with implications for the appropriateness and adoption of technologies or the success of alternative cropping systems This book examines the challenges of adaptation in smallholder farming in Africa analysing the social economic political and climatic uncertainties that impact on agriculture in the region and the range of solutions proposed Drawing on case studies of genetically modified crops conservation agriculture and other climate smart solutions in eastern and southern Africa the book identifies how uncertainties are framed from above as well experienced from below by

farmers themselves It provides a compelling insight into why ideas about adaptation emerge from whom and with what implications This book offers a unique perspective and will be highly relevant to students of climate change adaptation food security and poverty alleviation as well as policy makers and field practitioners in international development and agronomy

Adapting to the Impacts of Climate Change National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, America's Climate Choices: Panel on Adapting to the Impacts of Climate Change, 2011-01-06 Across the United States impacts of climate change are already evident Heat waves have become more frequent and intense cold extremes have become less frequent and patterns of rainfall are likely changing The proportion of precipitation that falls as rain rather than snow has increased across the western United States and Arctic sea ice has been reduced significantly Sea level has been rising faster than at any time in recent history threatening the natural and built environments on the coasts Even if emissions of greenhouse gases were substantially reduced now climate change and its resulting impacts would continue for some time to come To date decisions related to the management and protection of the nation's people resources and infrastructure have been based on records in the recent past when climate was relatively stable Adapting to the Impacts of Climate Change part of the congressionally requested America's Climate Choices suite of studies calls for a new paradigm one that considers a range of possible future climate conditions and impacts that may be well outside the realm of past experience Adaptation requires actions from many decision makers in federal state tribal and local governments the private sector non governmental organizations and community groups However current efforts are hampered by a lack of solid information about the benefits costs and effectiveness of various adaptation options climate information on regional and local scales and a lack of coordination Adapting to the Impacts of Climate Change calls for a national adaptation strategy that provides needed technical and scientific resources incentives to begin adaptation planning guidance across jurisdictions shared lessons learned and support of scientific research to expand knowledge of impacts and adaptation

Successful Adaptation to Climate Change Susanne C. Moser, Maxwell T. Boykoff, 2013-07-18 What does successful adaptation look like This is a question we are frequently asked by planners policy makers and other professionals charged with the task of developing and implementing adaptation strategies While adaptation is increasingly recognized as an important climate risk management strategy and on the ground adaptation planning activity is becoming more common place there is no clear guidance as to what success would look like what to aim for and how to judge progress This edited volume makes significant progress toward unpacking the question of successful adaptation offering both scientifically informed and practice relevant answers from various sectors and regions of the world It brings together 18 chapters from leading experts within the field to present careful analyses of different cases and situations questioning throughout commonly avowed truisms and unspoken assumptions that have pervaded climate adaptation science and practice to date This book offers not one answer but demonstrates how the question of success in important ways is normative and context

specific It identifies the various dimensions of success such as economic political institutional ecological and social explores the tensions between them and compiles encouraging evidence that resolutions can be found The book appraises how climatic and non climatic stressors play a role what role science does and can play in adaptation decision making and how trade offs and other concerns and priorities shape adaptation planning and implementation on the ground This is timely interdisciplinary text sheds light on key issues that arise in on the ground adaptation to climate change It bridges the gap between science and practical application of successful adaptation strategies and will be of interest to both students academics and practitioners *Climate Change and the Law* Erkki J. Hollo,Kati Kulovesi,Michael Mehling,2012-12-04

Climate Change and the Law is the first scholarly effort to systematically address doctrinal issues related to climate law as an emergent legal discipline It assembles some of the most recognized experts in the field to identify relevant trends and common themes from a variety of geographic and professional perspectives In a remarkably short time span climate change has become deeply embedded in important areas of the law As a global challenge calling for collective action climate change has elicited substantial rulemaking at the international plane percolating through the broader legal system to the regional national and local levels More than other areas of law the normative and practical framework dedicated to climate change has embraced new instruments and softened traditional boundaries between formal and informal public and private substantive and procedural so ubiquitous is the reach of relevant rules nowadays that scholars routinely devote attention to the intersection of climate change and more established fields of legal study such as international trade law Climate Change and the Law explores the rich diversity of international regional national sub national and transnational legal responses to climate change Is climate law emerging as a new legal discipline If so what shared objectives and concepts define it How does climate law relate to other areas of law Such questions lie at the heart of this new book whose thirty chapters cover doctrinal questions as well as a range of thematic and regional case studies As Christiana Figueres Executive Secretary of the United Nations Framework Convention on Climate Change UNFCCC states in her preface these chapters collectively provide a review of the emergence of a new discipline its core principles and legal techniques and its relationship and potential interaction with other disciplines Adapting to an Uncertain Climate Tiago Capela Lourenço,Ana

Rovisco,Annemarie Groot,Carin Nilsson,Hans-Martin Füssel,Leendert Van Bree,Roger B. Street,2014-04-14 Climate change highlights the challenges for long term policy making in the face of persistent and irreducible levels of uncertainties It calls for the development of flexible approaches innovative governance and other elements that contribute to effective and adaptive decision making Exploring these new approaches is also a challenge for those involved in climate research and development of adaptation policy The book provides a dozen real life examples of adaptation decision making in the form of case studies Water supply management in Portugal England and Wales and Hungary Flooding including flood risk in Ireland coastal flooding and erosion in Southwest France and flood management in Australia s Hutt River region Transport and

utilities including the Austrian Federal railway system public transit in Dresden and Quebec hydro electric power Report examining communication of large numbers of climate scenarios in Dutch climate adaptation workshops **Global Corruption Report: Climate Change** Transparency International,2013-11-26 The global response to climate change will demand unprecedented international cooperation deep economic transformation and resource transfers at a significant scale Corruption threatens to jeopardise these efforts Transparency International's Global Corruption Report Climate Change is the first publication to comprehensively explore such corruption risks More than fifty leading experts and practitioners contribute covering four key areas governance investigating major governance challenges towards tackling climate change mitigating climate change reducing greenhouse gas emissions with transparency and accountability adapting to climate change identifying corruption risks in climate proofing development financing and implementation of adaptation forestry governance responding to the corruption challenges plaguing the forestry sector and how these challenges need to be integrated into current international strategies to halt deforestation and promote reforestation The Global Corruption Report Climate Change provides essential policy analysis to help policy makers practitioners and other stakeholders understand these risks and develop effective responses at a critical point in time when the main architecture for climate governance is being developed
