Müller, Barry Jacobs, 2009-12-30 Serotonin 5 hydroxytryptamine often cited as 5 HT is one of the major excitatory neurotransmitter and the serotonergic system is one of the best studied and understood transmitter systems It is crucially involved in the organization of virtually all behaviours and in the regulation of emotion and mood Alterations in the serotonergic system induced by e g learning or pathological processes underlie behavioural plasticity and changes in mood which can finally result in abnormal behaviour and psychiatric conditions Not surprisingly the serotonergic system and its functional components appear to be targets for a multitude of pharmacological treatments examples of very successful drugs targeting the serotonergic system include Prozac and Zoloft The last decades of research have not only fundamentally expanded our view on serotonin but also revealed in much more detail an astonishing complexity of this system which comprises a multitude of receptors and signalling pathways A detailed view on its role in basal but also complex behaviours emerged and was presented in a number of single review articles Although much is known now the serotonergic system is still a fast growing field of research contributing to our present understanding of the brain's function during normal and disturbed behaviour This handbook aims towards a detailed and comprehensive overview over the many facets of behavioural
