

A THEORY OF THE FORMATION OF ANIMALS

By
W. T. HILLIER, M.R.C.S., L.R.C.P.

"Animals have a peculiar beauty, and the more carefully and minutely they are studied, the more does our wonder grow, when we realize that even the minutest visible portions have a beauty of structure and function. Yet are we still animals. There is, so far as can be told, no essential or peculiar characteristic in the composition of Man's body that makes it different from the body of any other animal, and so it comes to pass that the study of any animal is able to tell us something about ourselves and about other animals."
