Scott,2021-09-09 Over the last decade water security has replaced sustainability as the key optic for thinking about how we manage water This reframing has offered benefits including clear recognition of the link between humans the environment and the right to water and also posed challenges the tendency in some quarters to interpret security solely in terms of geopolitical or economic securitisation In this collection the authors offer a radical repositioning of these debates updated to reflect the concerns of our post pandemic world The chapters in this volume examine several different themes including how water security articulates with locality and culture how it operates across spatial scales and its moral ethical resonances The chapters in this book were originally published in the journals Water International and International Journal of Water Resources Development
