Flight to the Future National Research Council,Division of Behavioral and Social Sciences and Education,Board on Human-Systems Integration,Panel on Human Factors in Air Traffic Control Automation,1997-01-28 Despite the strong safety record of the national airspace system serious disruptions occasionally occur often as a result of outdated or failed equipment Under these circumstances safety relies on the skills of the controllers and pilots and on reducing the number of aircraft in the air The current and growing pressures to increase the capacity to handle a greater number of flights has led to a call for faster and more powerful equipment and for equipment that can take over some of the tasks now being performed by humans Increasing the role of automation in air traffic control may provide a more efficient system but will human controllers be able to effectively take over when problems occur This

comprehensive volume provides a baseline of knowledge about the capabilities and limitations of humans relative to the variety of functions performed in air traffic control. It focuses on balancing safety with the expeditious flow of air traffic, identifying lessons from past air accidents. The book discusses the function of the national airspace system and the procedures for hiring, training, and evaluating controllers. Decisionmaking, memory, alertness, vigilance, sleep patterns during shift work, communication, and other factors in controllers' performance. Research on automation and human factors in air traffic control and incorporation of findings into the system. The Federal Aviation Administration's management of the air traffic control system and its dual mandate to promote safety and the development of air commerce. This book also offers recommendations for evaluation of the human role in automated air traffic control systems and for managing the introduction of automation into current facilities and operations. It will be of interest to anyone concerned about air safety: policymakers, regulators, air traffic managers, and controllers, airline officials, and passenger advocates.

Human Factors Management and Organization, 1993 *Risk-Taking, Prevention and Design* Guy Andre Boy, Edwige Quillerou, 2022-07-29 Most approaches that contribute to the design of life critical systems almost only consider nominal situations where procedures can be developed and used to achieve satisfactory operations. These kinds of approaches lead to rigid ways of doing things and poorly address the needs for flexibility, especially when things go wrong. It is not a matter of human adaptation but of human systems integration. HSI flexibility requires cross fertilization of appropriate experiences combined with creativity. This book provides risk management approaches and methods for combining prevention and design. Features: Discusses risk management approaches and methods for combining prevention and design. Examines a transdisciplinary approach to risk management in design and operations of safer life critical systems. Proposes an approach of work analysis during design which enables design teams to consider HSI issues early enough to fix organizational problems upstream. Teaches the combination of prevention and design for safety management. This book gathers and analyzes relevant field data to rationalize human and systems activity in various life critical environments and workplaces in a systemic manner and in a variety of safety domains: e.g. aviation, road, navy, manufacturing, hospital, transportation, defense, sport. It further formalizes and analyzes risk taking, experience, expertise, stories about critical events, and scientific and professional literature data to help engineering designers, managers, and health and safety specialists. The text is primarily written for graduate students and professionals working in the fields of occupational health and safety, ergonomics, human factors, cognitive engineering, and human system integration.
