Architecture Or Art Or Parallels Or Connections:

Sculpting Space Barry A. Berkus, 2002 Berkus's custom residences bring to life the personalities and programmes of their clients. Rather than reiterating a signature style, Berkus approaches the design of a home as a collaborative process. Together the client and architect explore the needs.

Architecture/Art/Parallels/Connections Barry A. Berkus, 2000 Looks at the parallels between works of art that are often separated by long periods of time or spatial context.

The Embodied Image Juhani Pallasmaa, 2011-05-16 The Embodied Image: Imagination and Imagery in Architecture. Juhani Pallasmaa. All artistic and architectural effects are evoked, mediated and experienced through poeticised images. These images are embodied and lived experiences that take place in the flesh of the world, becoming part of us at the same time that we unconsciously project aspects of ourselves on to a conceived space object or event. Artistic images have a life and reality of their own and they develop through unexpected associations rather than rational and causal logic. Images are usually thought of as retinal pictures but profound poetic images are multi-sensory and they address us in an embodied and emotive manner. Architecture is usually analysed and taught as a discipline that articulates space and geometry but the mental impact of architecture arises significantly from its image quality that integrates the various aspects and dimensions of experience into a singular internalised and remembered entity. The material reality is fused with our mental and imaginative realm. The book is organised into five main parts that look at in turn the image in contemporary culture, language, thought and the image, the many faces of the image, the poetic image and finally the architectural image. The Embodied Image is illustrated with over sixty images in pairs which are diverse in subject. They range from scientific images to historic artistic and architectural masterpieces. Artworks span Michelangelo and Vermeer to Gordon Matta-Clark and architecture takes in Modern Masters such as Mies van der Rohe, Le Corbusier and Alvar Aalto as well as significant contemporary works by Steven Holl and Daniel Libeskind.

Connectivity and Global Studies Jan Nederveen Pieterse, 2021-02-19 This textbook provides readers with evocative and analytical accounts of social processes that are linked to globalization and connectivity, which includes a wide range of multi-centred connections in history, DNA analysis, technology, art, populism and political economy. Rather than globalization, Nederveen Pieterse focuses on connectivity. His approach to globalization differs from both structuralist accounts of the world system and the institutionally centred focus of much work in international studies. This synthesis will provide a new resource to reconstruct theoretical approaches to globalization and global studies. Fluently written, clearly organized and with an interdisciplinary approach, the book will be accessible to upper division undergraduates and graduates in social sciences including students and researchers from the fields of sociology, politics, political economy, development studies and international relations.

Foundations of Parallel Programming D. B. Skillicorn,1994-12 The major reason for the lack of use of parallel computing is the mismatch between the complexity and variety of parallel hardware and the software development tools to program it The cost of the developing software needs to be amortised over decades but the platforms on which it executes change every few years requiring complete rewrites The evident cost effectiveness of parallel computation has not been realized because of this mismatch This book presents an integrated approach to parallel software development that addresses software issues and performance issues together It presents a methodology for software construction that produces software that is architecture independent and intellectually abstract The software can execute efficiently on a range of existing and potential hardware configurations The approach is based on the construction of categorical data types a generalisation of abstract data types and of objects Categorical data types abstract both from the representation of a data type and also from the detailed control flow necessary to perform operations on it They thus impose a strong separation between the semantics on which programs can depend and the implementation which is therefore free to hide the parallel machine properties that are used
