Introduction to Embedded Systems David Russell, 2022-05-31 Many electrical and computer engineering projects involve some kind of embedded system in which a microcontroller sits at the center as the primary source of control. The recently developed Arduino development platform includes an inexpensive hardware development board hosting an eight bit ATMEGA ATmega family processor and a Java based software development environment. These features allow an embedded systems beginner the ability to focus their attention on learning how to write embedded software instead of wasting time overcoming the engineering CAD tools learning curve. The goal of this text is to introduce fundamental methods for creating embedded software in general with a focus on ANSI C. The Arduino development platform provides a great means for accomplishing this task. As such, this work presents embedded software development using 100% ANSI C for the Arduino's ATmega328P processor. We deviate from using the Arduino specific Wiring libraries in an attempt to provide the most general embedded methods. In this way, the reader will acquire essential knowledge necessary for work on future projects involving other processors. Particular attention is paid to the notorious issue of using C pointers in order to gain direct access to microprocessor registers which ultimately allow control over all peripheral interfacing.

Based on the specialization and energy saving society of computers, we explain the basics of computer architecture using relatively easy to understand devices: microcontrollers. In the revised edition, the content of the actual class was reflected and Chapter 12 Communication by SPI was greatly expanded and Chapter 15 Basic Compiler was newly added to make the content easier to use.

Microcontroller Education Dimosthenis E. Bolanakis,2022-05-31 Microcontroller education has experienced tremendous change in recent years This book attempts to keep pace with the most recent technology while holding an opposing attitude to the No Need to Reinvent the Wheel philosophy The choice strategies are in agreement with the employment of today s flexible and low cost Do It Yourself DIY microcontroller hardware along with an embedded C programming approach able to be adapted by different hardware and software development platforms Modern embedded C compilers employ built in features for keeping programs short and manageable and hence speeding up the development process However those features eliminate the reusability of the source code among diverse systems The recommended programming approach relies on the motto Code More to Learn Even More and directs the reader toward a low level accessibility of the microcontroller device The examples addressed herein are designed to meet the demands of Electrical Electronic Engineering discipline where the microcontroller learning processes definitely bear the major responsibility The programming strategies are in line with the two virtues of C programming language that is the adaptability of the source code and the low level accessibility of the hardware system Some accompanying material of the book can be found at http://bit.ly/mcu_files

Building Wireless Sensor Networks Using Arduino Matthijs Kooijman,2015-10-19 Leverage the powerful Arduino and XBee platforms to monitor and control your surroundings About This Book Build your own low power wireless network using ready made Arduino and XBee hardware Create a complex project using the Arduino prototyping platform A guide that explains the concepts and builds upon them with the help of examples to form projects Who This Book Is For This book is targeted at embedded system developers and hobbyists who have some working knowledge of Arduino and who wish to extend their projects using wireless connectivity What You Will Learn Interact with XBee boards using the XCTU program on Windows OS X or Linux Make your Arduino boards communicate wirelessly using XBee modules in the advanced API mode Centrally collect and store measured sensor data in the cloud or your own database Connect the coordinator Arduino to the Internet and send data to web services Control your environment automatically based on sensor input from your network Interact with off the shelf ZigBee Home Automation devices Make your devices battery powered and let them sleep to get months or even years of battery life In Detail Arduino has been established as the de facto standard microcontroller programming platform being used for one off do it yourself projects as well as prototypes for actual products By providing a myriad of libraries the Arduino community has made it very easy to interact with pretty much any piece of hardware out there XBee offers a great range of low power wireless solutions that are easy to work with by taking all of the complexity of wireless mesh networking out of your hands

and letting you focus on what to send without worrying about the how Building wireless sensor networks is cost effective as well as efficient as it will be done with Arduino support The book starts with a brief introduction to various wireless protocols concepts and the XBee hardware that enables their use Then the book expands to explain the Arduino boards to you letting them read and send sensor data collect that data centrally and then even control your home from the Internet Moving further more advanced topics such as interacting through the standard Zigbee Home Automation protocol or making your application power efficient are covered By the end of the book you will have all the tools needed to build complete real world solutions Style and approach A hands on guide featuring a single home automation project that can be built as described or with endless variations Every step is illustrated with complete examples and screenshots allowing you to build the examples swiftly
