Susceptibility of Distribution Systems to Negative Pressure Transients Kala K. Fleming, 2006 Low or negative pressure transients also called surge or water hammer create temporary opportunities for external chemical and microbial contaminants at higher pressure to enter the water distribution system creating potential health hazard and potential weakening of distribution pipes leading to failure This study investigates how such events as power outages pump shutdowns valve operations main flushing firefighting and main breaks can create significant rapid temporary drops in system pressure The report offers useful recommendations for using surge models to optimally locate pressure monitors and to minimize the occurrence and impact from low and negative pressure transients

Water Management Challenges in Global Change B. Ulanicki, Kalanithy Vairavamoorthy, David Butler, Peter L. M. Bounds, Fayyaz Ali Memon, 2020-11-26 Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry CCWI2007 and the Sustainable Urban Water Management SUWM2007 conferences The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods Issues such as economic globalisation climate changes and water shortages call for a new approach to water systems management which addresses the relevant technical social and economic aspects This collection represents the views of academic and industrial experts from a number of countries who provide technical solutions to current water management problems and present a vision for addressing the global questions The themes underlying many of the contributions include energy and material savings water savings and the integration of different aspects of water management The papers are grouped into three themes covering water distribution systems sustainable urban water management and modelling of wastewater treatment plants The water distribution topics cover asset and information management planning monitoring and control hydraulic modelling of steady state and transients water quality and treatment demand and leakage management optimisation design and decision support systems as well as reliability and security of water distribution systems The sustainable urban water management topics include urban drainage systems water reuse social aspects of water management and also selected facets of water resources and irrigation Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems To address this imbalance this book presents a number of modelling techniques developed specifically for these plants Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics managers engineers and planners and postgraduate students
