- List two reasons why the ideas of Democritus were not useful in a scientific sense. _____
- The modern process of discovery about atoms began with the theories of an English schoolteacher named _____.
- Circle the letter of each sentence that is true about Dalton's atomic theory.
 - All elements are composed of tiny, indivisible particles called atoms.
 - An element is composed of several types of atoms.
 - Atoms of different elements can physically mix together, or can chemically combine in simple, whole-number ratios to form compounds.
 - Chemical reactions occur when atoms are separated, joined, or rearranged; however, atoms of one element are never changed into atoms of another element by a chemical reaction.
- In the diagram, use the labels *mixture* and *compound* to identify the mixture of elements A and B and the compound that forms when the atoms of elements A and B combine chemically.
