Blast Mitigation Experimental And Numerical Studies:

Blast Mitigation Arun Shukla, Yapa D. S. Rajapakse, Mary Ellen Hynes, 2013-07-06 Blast Mitigation Experimental and Numerical Studies covers both experimental and numerical aspects of material and structural response to dynamic blast loads and its mitigation. The authors present the most up to date understanding from laboratory studies and computational analysis for researchers working in the field of blast loadings and their effect on material and structural failure. Develop designs for lighter and highly efficient structural members for blast energy absorption. Discuss vulnerability of underground structures. Present methods for dampening blast overpressures. Discuss structural post blast collapse and give attention to underwater explosion and implosion effects on submerged infrastructure and mitigation measures for this environment.

Critical Energy Infrastructure Protection Djalel Eddine Tria, Pawel Muzolf, Kamil Sobczyk, 2022-05-15 Damage to critical energy infrastructure as a result of terrorism, criminal activity or natural disaster can have a significant impact at both a national and international level. Reducing the vulnerability of critical infrastructure to protect populations is therefore a high priority for governments worldwide and high quality training courses and advanced technologies are imperative in this regard. This book presents edited contributions from the NATO Advanced Training Course ATC entitled Critical Energy Infrastructure Protection. Innovative Structures and Materials for Blast and Ballistic Protection held as a virtual event from 22-25 March 2021. The principal aim of the course was to gather specialists from NATO member and partner countries interested in protecting their critical infrastructure against terrorist attacks and to share research and practical experience in this field. The meeting provided a forum for participants and speakers to disseminate their recent work and also served to promote the exchange of ideas and international cooperation among scientists and engineers. The focus was on the physical protection of critical infrastructure in the face of certain types of intentional threat or accident such as explosions, impacts and blast waves and the experts shared their experience on topics including the mitigation of risks, classification of vulnerabilities, improvement of resilience, advanced protective materials, dynamic testing of materials and structures, simulations and numerical prediction methods. The book will be of interest to all those whose work involves protecting critical infrastructure from the threat of terrorist attacks.

Blast Mitigation Strategies in Marine Composite and Sandwich Structures Srinivasan Gopalakrishnan, Yapa Rajapakse, 2017-12-14 This book primarily focuses on methodologies to enable marine structures to resist high velocity impact loadings. It is based on invited talks presented at the recent India USA workshop on Recent Advances in Blast Mitigation Strategies in Civil and Marine Composite Structures. The book comprises content from top researchers from India and the USA and covers various aspects of the topic including modeling and simulation, design aspects, experimentation and various challenges. These failure modes significantly reduce the structural integrity of the marine structures unless they are designed to resist such harsh loadings. Understanding the mechanics of these structures under harsh loadings is still an open area of research and the behavior of these structures is not fully

understood The book highlights efforts to reduce the effects of blast loadings on marine composite structures Intended for researchers scientists and practicing engineers the book focuses not only the design and analysis challenges of marine composite structures under such harsh loading conditions but also provides new design guidelines Structures Under Shock and Impact XV S. Syngellakis,G. Schleyer,2018-10-23 Discussing the increasing need to protect civilian infrastructure and industrial facilities against unintentional loads arising from accidental impact and explosion events as well as terrorist attack this book contains papers presented at the 15th International Conference on Structures under Shock and Impact This successful conference series has been regularly held since it began in 1989 in Cambridge Massachusetts While advances have been made over this period many challenges remain such as to develop more effective and efficient blast and impact mitigation approaches than currently exist The primary focus remains the survivability of physical facilities and the protection of people as well as reducing economic losses and impact on the environment with emphasis on innovative protective technologies to support the needs of an economically growing modern society The application of this technology ranges from the safe transportation of people in several modes and the transportation of dangerous or combustible materials to defences against natural hazard threats such as flood wind storm tsunami and earthquake Large scale testing is prohibitive and small scale laboratory testing results in scaling uncertainties Continuing research is therefore essential to improve knowledge on how these structures behave under a variety of load actions some of which interact making it even more complex and difficult to define Consequently more use of advanced numerical simulations for load and structural response calculations is common practice in industry and research Such calculations can directly be used in design and risk assessment calculations but also be applied as input to more simplified design tools and design codes Whether numerical or analytical modelling techniques are employed experimental validation is vital for there to be acceptance of the approach to be used The published research aims for the exchange of ideas and results to promote a better understanding of the critical issues relating to the testing behaviour modelling and analyses of protective structures against blast and impact loading

Explosion Blast Response of Composites Adrian P. Mouritz,Yapa D.S. Rajapakse,2017-05-22 Explosion Blast Response of Composites contains key information on the effects of explosions shock waves and detonation products e g fragments shrapnel on the deformation and damage to composites The book considers the blast response of laminates and sandwich composites along with blast mitigation of composites including coating systems and energy absorbing materials Broken down under the following key themes Introduction to explosive blast response of composites Air explosion blast response of composites Underwater explosion blast response of composites and High strain rate and dynamic properties of composites the book deals with an important and contemporary topic due to the extensive use of composites in applications where explosive blasts are an ever present threat such as military aircraft armoured vehicles naval ships and submarines body armour and other defense applications In addition the growing use of IEDs and other types of bombs used by terrorists to

attack civilian and military targets highlights the need for this book Many terrorist attacks occur in subways trains buses aircraft buildings and other civil infrastructure made of composite materials Designers engineers and terrorist experts need the essential information to protect civilians military personnel and assets from explosive blasts Focuses on key aspects including both modeling analysis and experimental work Written by leading international experts from academia defense agencies and other organizations Timely book due to the extensive use of composites in areas where explosive blasts are an ever present threat in military applications
