Biodiversity, Ecosystem Functioning, and Human Wellbeing Shahid Naeem, Daniel E. Bunker, Andy Hector, Michel Loreau, Charles Perrings, 2009-07-30 How will biodiversity loss affect ecosystem functioning ecosystem services and human well being In an age of accelerating biodiversity loss this timely and critical volume summarizes recent advances in biodiversity ecosystem functioning research and explores the economics of biodiversity and ecosystem services The book starts by summarizing the development of the basic science and provides a meta analysis that quantitatively tests several biodiversity and ecosystem functioning hypotheses It then describes the natural science foundations of biodiversity and ecosystem functioning research including quantifying functional diversity the development of the field into a predictive science the effects of stability and complexity methods to quantify mechanisms by which diversity affects functioning the importance of trophic structure microbial ecology and spatial dynamics Finally the book takes research on biodiversity and ecosystem functioning further than it has ever gone into the human dimension describing the most pressing environmental challenges that face humanity and the effects of diversity on climate change mitigation restoration of degraded habitats managed ecosystems pollination disease and biological invasions However what makes this volume truly unique are the chapters that consider the economic perspective These include a synthesis of the economics of ecosystem services and biodiversity and the options open to policy makers to address the failure of markets to account for the loss of ecosystem services an examination of the challenges of valuing ecosystem services and hence to understanding the human consequences of decisions that neglect these services and an examination of the ways in which economists are currently incorporating biodiversity and ecosystem functioning research into decision models for the conservation and management of biodiversity A final section describes new advances in ecoinformatics that will help transform this field into a globally predictive science and summarizes the advancements and future directions of the field The ultimate conclusion is that biodiversity is an essential element of any strategy for sustainable development

Khan,2015-06-20 This study presents authentic data compiled from field experiments and investigations and provides a point of reference for any future changes associated with anthropogenic activity in semiarid ecosystems Three years of continuous and rigorous empirical research on biodiversity from phytoplankton to higher plants and from zooplankton to higher animals all flora and fauna in India s semiarid region have culminated in this work Though there are many studies available on issues related to biodiversity the majority cover either specific groups of plants or groups of animals with the exception of this book studies that include all flora and fauna including the phyto and zooplanktons in a given ecosystem are not readily available Further the book focuses on an extremely important topic firstly because semiarid landscapes are highly vulnerable to climate change and secondly because other developmental activities will be undertaken in the region in an effort to meet its energy requirements As such the results of the current study will provide a standard protocol for subsequent monitoring and mapping of biodiversity for conservation and management The book explores quantifies and surveys plant and animal species from aquatic and terrestrial ecosystems assessing and quantitatively analyzing the diversity indices of different vegetation strata Further it investigates the conservation status of each species flora and fauna in keeping with IUCN categories The
