1. What elements cycle between living and non-living organisms?

carbon, hydrogen, nitrogen, oxygen, phosphorus, sulfur

2. What is a mnemonic device to help you to remember the elements that life needs to survive?

chnops

Complete the table below about why each element in the biogeochemical cycle is important to life.

Element	Why Is It Important to Life?
3. C	carbon
4. H	hydrogen
5. N	nitrogen
6. O	oxygen
7. P	phosphorus
8. S	sulfur

Complete the table below about how each element is stored and cycled between living and non-living things.

	9. Water	10. Carbon	11. Nitrogen	12. Phosphorus
Where is it stored?	in the ocean reservoir	stored in the atmosphere	stored in the atmosphere	stored in the rock
How does it get into animals?	by drinking it	by eating plants or animals that already have carbon	they eat the plants	they going to feed on that and bring the phosphorus into them from the plants
How does it get into plants?	it gets into plants through their roots	through photosynthesis	70% nitrogen turns into bacteria and gets to plants	the rain will break the rock into soil and it will be absorbed through plants roots
How does it get recycled again?	the rain will break the rock into soil and it will be absorbed through	it gets recycled through respiration	were going to have bacteria and as we decompose dead and dying	as we die and decompose

Biogeochemical Cycles and Climate A. J. Dolman, 2019 Changing concentrations of greenhouse gases are key to our changing climate Biogeochemical Cycles and Climate examines the interaction of the main biogeochemical cycles of the earth with the physics of climate from the perspective of the earth as an integrated system Biogeochemical cycles play a fundamental role in the Earth's system they describe the movement of matter and transfer of energy around the planet This text aims to answer some fundamental questions How have the cycles of key nutrients such as carbon nitrogen phosphorus and water changed both in the geological past and more recently through the impact of humans on the Earth System How do these cycles interact with each other and affect the physical properties of climate How can we use this knowledge to mitigate some of the impacts of changing biogeochemistry on climate and the Earth's habitability and resilience Understanding the complex interactions of biogeochemistry with the Earth's climate is crucial for understanding past and current changes in climate and above all for the future sustainable management of our planet *Global biogeochemical cycles* Butcher, 1992-08-12 Global biogeochemical cycles The Major Biogeochemical Cycles and Their Interactions Bert Bolin, Robert B. Cook, 1983 **Interactions of C, N, P, and S Biogeochemical Cycles and Global Change** R. Wollast, Fred T. Mackenzie, Lei Chou, 1993 This book is a natural extension of the SCOPE Scientific Committee of Problems on the Environment volumes on the carbon C nitrogen N phosphorus P and sulfur S biogeochemical cycles and their interactions Likens 1981 Bolin and Cook 1983 Substantial progress in the knowledge of these cycles has been made since publication of those volumes In particular the nature and extent of biological and inorganic interactions between these cycles have been identified positive and negative feedbacks recognized and the relationship between the cycles and global environmental change preliminarily elucidated In March 1991 a NATO Advanced Research Workshop was held for one week in Melreux Belgium to reexamine the biogeochemical cycles of C N P and S on a variety of time and space scales from a holistic point of view This book is the result of that workshop The biogeochemical cycles of C N P and S are intimately tied to each other through biological productivity and subsequently to problems of global environmental change These problems may be the most challenging facing humanity in the 21st century In the broadest sense global change encompasses both changes to the status of the large globally connected atmospheric oceanic and terrestrial environments e.g. tropospheric temperature increase and change occurring as the result of nearly simultaneous local changes in many regions of the world e.g. eutrophication *Interactions of the Major Biogeochemical Cycles* Jerry M.
