Biome Distribution Lab

Background

In this activity, you will investigate the relationship between the amount of rainfall and the variance of temperature and the effect on the distribution of biomes globally. This exercise provides practice in associating climate (as expressed in monthly averages of precipitation and temperature) with biomes. Below are three ecotone climatograms, grids on which averages of precipitation and temperature at a particular location are graphed.

Although other factors may greatly affect climate, a climatogram provides enough information to identify a biome from which the data were obtained. When you make your own climatograms, be extremely careful as to how you record the information. All temperature readings are measured on the right side of the climatogram as a line graph. All precipitation measurements are on the left side of the climatogram and represented as a bar graph.
