The Researcher's Journey Klaus Solberg Söilen, 2025-07-01 Navigating the

academic ecosystem involves a variety of challenges that extend beyond the application of research methods. These challenges include understanding the university structure, academic conferences, publication strategy, securing research funding, and how modern technologies like artificial intelligence have changed the very purpose of researchers. Written in an engaging and accessible tone, this book guides advanced and early career researchers through the real world challenges that face academics in the social sciences. The book is divided into three parts. The first gives a brief history of the scientific method and social science research processes; the second critically addresses the current state of research methods in the social sciences; and the third discusses implications for ethics in light of scientific and technological advances.

Life without God Rik Peels, 2023-05-25 In this book Rik Peels explores atheism from a new perspective that aims to go beyond the highly polarized debate about arguments for and against God's existence. Since our beliefs about the most important things in life are not usually based on arguments, we should look beyond atheistic arguments and explore what truly motivates the atheist. Are there certain ideals or experiences that explain the turn to atheism? Could atheism be the default position for us, not requiring any arguments whatsoever? And what about the often discussed arguments against belief in God: is there something that religious and nonreligious people alike can learn from them? This book explores how a novel understanding of atheism is possible and how it effectively moves the God debate further. Believers and nonbelievers can learn much from Peels's assessment of arguments for and against atheism.

The God Debaters Adrian Rosenfeldt, 2022-05-04 This book examines the post 9/11 God debate in the West. Through a close study of prominent English God debaters Richard Dawkins, Karen Armstrong, Christopher Hitchens, and Terry Eagleton, Adrian Rosenfeldt demonstrates that New Atheist and religious apologist ideas and arguments about God, science, and identity are driven by mythic autobiographical narratives and Protestant or Catholic cultural heritage. This study is informed by criticism of the New Atheist polemic as being positivistic and the religious apologists as propagating sophisticated theology. In both cases, the God debaters are perceived as disassociating themselves from human lived experience. It is through reconnecting the God debaters' intellectual ideas to their cultural and social background that the God debate can be grounded in a recognisable human reality that eludes reductive distinctions and disembodied abstractions.

Evolutionary Bioinformatics Donald R. Forsdyke, 2016-04-27 Now in its third edition and supplemented with more online material, this book aims to make the new information-based rather than gene-based bioinformatics intelligible both to the bio people and the info people. Books on bioinformatics have traditionally served gene hunters and biologists who wish to construct family trees showing tidy lines of descent. While dealing extensively with the exciting topics of gene discovery and database searching, such books have hardly considered genomes as information channels through which multiple forms and levels of information have passed through the generations. This new bioinformatics contrasts with the old gene-based bioinformatics that so preoccupies previous texts. Forms of information that we are familiar with (mental, textual) are related to forms with which we are less familiar (hereditary). The book extends a line of

evolutionary thought that leads from the nineteenth century Darwin Butler Romanes Bateson through the twentieth Goldschmidt White and into the twenty first the final works of the late Stephen Jay Gould Long an area of controversy diverging views may now be reconciled
