Behavioural mapping in Sofia

CHALLENGES ADDRESSED

Behavioural mapping is structured observation combining different techniques for documentation, mapping and counting of activities performed by people moving and occupying a defined space in chosen moments of time. It helps to explore the quantity and the quality of various activities performed at the place observed, the non-motorised moving, staying, recreating or playing. The process of gathering of data through observations and data analysis and visualisation can reveal the ways of presence of different targeted groups in the study area and their behaviour. This information can present overall pictures of health, wellbeing, socialisation, time budget and physical activity. The results can provide in-depth knowledge of the users' dynamics at specified locations as input for urban regeneration, decisions, planning and design of healthy conditions and implementation of place oriented NBSs.

 The Routledge Handbook of Designing Public Spaces for Young People Janet Loebach,Sarah Little,Adina Cox,Patsy Eubanks Owens,2020-06-03 The Routledge Handbook of Designing Public Spaces for Young People is a thorough and

practical resource for all who wish to influence policy and design decisions in order to increase young people's access to and use of public spaces as well as their role in design and decision making processes. The ability of youth to freely enjoy public spaces and to develop a sense of belonging and attachment to these environments is critical for their physical, social, cognitive and emotional development. Young people represent a vital citizen group with legitimate rights to occupy and shape their public environments yet they are often driven out of public places by adult users' restrictive bylaws or hostile designs. It is also important that children and youth have the opportunity to genuinely participate in the planning of public spaces and to have their needs considered in the design of the public realm. This book provides both evidence and tools to help effectively advocate for more youth inclusive public environments as well as integrate youth directly into both research and design processes related to the public realm. It is essential reading for researchers, design and planning professionals, community leaders and youth advocates.

It summarizes current evidence-based approaches to behavior change in chapters authored by leading theorists, researchers and practitioners from multiple disciplines including psychology, sociology, behavioral science, economics, philosophy and implementation science. It is the go-to resource for researchers, students, practitioners and policy makers looking for current knowledge on behavior change and guidance on how to develop effective interventions to change behavior.

Handbook Of Spatial Research Paradigms And Methodologies Nigel Foreman, Raphael Gillett, 2013-01-11

Spatial cognition is a broad field of enquiry emerging from a wide range of disciplines and incorporating a wide variety of paradigms that have been employed with human and animal subjects. This volume is part of a two-volume handbook reviewing the major paradigms used in each of the contributors' research areas. This volume considers the issues of neurophysiological aspects of spatial cognition, the assessment of cognitive spatial deficits arising from neural damage in humans and animals and the observation of spatial behaviours in animals in their natural habitats. This handbook should be of interest to new and old students alike. The student new to spatial research can be brought up to speed with a particular range of techniques, made aware of the background and pitfalls of particular approaches and directed toward useful sources. For seasoned researchers, the handbook provides a rapid scan of the available tools that they might wish to consider as alternatives when wishing to answer a particular spatial research problem.
