This book offers a cross disciplinary overview of transport systems and the ways in which they interact with urban and regional planning decisions and environmental issues. It offers a thoughtful critique of existing methodology and policy raising issues providing facts explaining linkages and particularly stimulating debate. The book methodically explores the definitions trends problems objectives and policies of transport planning. In particular the author looks at land use as a major determinant of the nature and extent of the demand for transport concluding that the management of land use has to be a key element of any sustainable transport policy. *Deutsche Nationalbibliografie* ,2005-07
