*Geological Field Techniques* Angela L. Coe, 2011-07-26 **GEOLOGICAL FIELD TECHNIQUES** The understanding of Earth processes and environments over geological time is highly dependent upon both the experience that can only be gained through doing fieldwork and the collection of reliable data and appropriate samples in the field This textbook explains the main data gathering techniques used by geologists in the field and the reasons for these with emphasis throughout on how to make effective field observations and record these in suitable formats Equal weight is given to assembling field observations from igneous metamorphic and sedimentary rock types There are also substantial chapters on producing a field notebook collecting structural information recording fossil data and constructing geological maps *Geological Field Techniques* is designed for students amateur enthusiasts and professionals who have a background in geology and wish to collect field data on rocks and geological features Teaching aspects of this textbook include step by step guides to essential practical skills such as using a compass clinometer making a geological map and drawing a field sketch tricks of the trade checklists flow

charts and short worked examples over 200 illustrations of a wide range of field notes maps and geological features appendices with the commonly used rock description and classification diagrams a supporting website hosted by Wiley Blackwell is available at [www.wiley.com/go/coe/geology](http://www.wiley.com/go/coe/geology)

*Earth's Evolving Systems* Ronald E. Martin, 2016-12-16 *Earth's Evolving Systems* The History of Planet Earth Second Edition is an introductory text designed for popular courses in undergraduate Earth history Written from a systems perspective it provides coverage of the lithosphere hydrosphere atmosphere and biosphere and discussion of how those systems interacted over the course of geologic time

*Our Dynamic Earth: A Primer* Matthew R. Bennett, 2022-01-18 Students taking undergraduate degrees in geography ecology earth science and environmental science frequently take an introductory unit in Physical Geography Some will have not done any geography since their early teens while others have more recent knowledge This range of backgrounds can be challenging for both the instructor and the student this primer aims to help A primer is a readable introduction to a subject more technical than a piece of popular science but less detailed than a specialist textbook It aims to give the reader a platform in a subject with which they may be unfamiliar so that they can proceed simultaneously or sequentially to more advanced texts and information Ideally the primer should have something for those without any knowledge while also challenge and entertaining those who do Not quite bedtime reading but a step in that direction *Our Dynamic Earth* introduces students to the Earth's origins to plate tectonics atmospheric and oceanographic circulation as well as to a range of Earth surface processes Idea to get you started in your studies

***The Equations of Life*** Charles S. Cockell, 2018-06-19 A groundbreaking argument for why alien life will evolve to be much like life here on Earth We are all familiar with the popular idea of strange alien life wildly different from life on earth inhabiting other planets Maybe it's made of silicon Maybe it has wheels Or maybe it doesn't In *The Equations of Life* biologist Charles S. Cockell makes the forceful argument that the laws of physics narrowly constrain how life can evolve making evolution's outcomes predictable If we were to find on a distant planet something very much like a lady bug eating something like an aphid we shouldn't be surprised The forms of life are guided by a limited set of rules and as a result there is a narrow set of solutions to the challenges of existence A remarkable scientific contribution breathing new life into Darwin's theory of evolution *The Equations of Life* makes a radical argument about what life can and can't be

*Marine Ecology* Michel J. Kaiser, Simon Jennings, David Thomas, 2020 There has never been a more important time to understand our marine environment Oceans influence our climate and provide a valuable source of food to billions of people They are vital to our very existence and they are under threat Clearly written and beautifully illustrated *Marine Ecology Processes Systems and Impacts* addresses the fundamental global processes of primary and microbial production that characterize marine systems before going on to detail the diverse systems we see around the world from coral reefs to polar regions from the shores to the deep sea The third section of the book *Impacts* tackles some of the most pressing environmental issues relevant to marine ecology including climate change conservation pollution disturbance the

impact of fisheries and aquaculture New to this edition A new chapter on Climate Change equips you to think more deeply about climate related issues by explaining the mechanisms through which oceans respond to the altering climate A new chapter on Sea and Society delves into the economic and sociological relationship between human beings and the ocean helping you to fully understand the value of marine ecosystems to mankind and how to manage this relationship responsibly A comprehensive update of the Microbial Production chapter has re organised and refreshed the scientific material presented to give a thorough grounding in the chemical principles that inform key microbial processes in marine ecology

Book jacket      *On Gaia* Toby Tyrrell, 2013-07-21 A critical examination of James Lovelock s controversial Gaia hypothesis One of the enduring questions about our planet is how it has remained continuously habitable over vast stretches of geological time despite the fact that its atmosphere and climate are potentially unstable James Lovelock s Gaia hypothesis posits that life itself has intervened in the regulation of the planetary environment in order to keep it stable and favorable for life First proposed in the 1970s Lovelock s hypothesis remains highly controversial and continues to provoke fierce debate On Gaia undertakes the first in depth investigation of the arguments put forward by Lovelock and others and concludes that the evidence doesn t stack up in support of Gaia Toby Tyrrell draws on the latest findings in fields as diverse as climate science oceanography atmospheric science geology ecology and evolutionary biology He takes readers to obscure corners of the natural world from southern Africa where ancient rocks reveal that icebergs were once present near the equator to mimics of cleaner fish on Indonesian reefs to blind fish deep in Mexican caves Tyrrell weaves these and many other intriguing observations into a comprehensive analysis of the major assertions and lines of argument underpinning Gaia and finds that it is not a credible picture of how life and Earth interact On Gaia reflects on the scientific evidence indicating that life and environment mutually affect each other and proposes that feedbacks on Earth do not provide robust protection against the environment becoming uninhabitable or against poor stewardship by us

*The Origin and the Evolution of Firms* J.A. Roels, 2012-03 The firms and markets of today s complex socio economic system developed in a spontaneous process termed evolution in just the same way as the universe the solar system the Earth and all that lives upon it Darwin s theory of evolution clearly demonstrated that evolution involved increasing organization As we began to explore the molecular basis of life and its evolution it became equally clear that it depended on the processing and communication of information This book develops a consistent theory of evolution in its wider sense examining the information based laws and forces that drive it Exploring subjects as diverse as economics and the theories of thermodynamics the author revisits the paradox of the apparent conflict between the laws of thermodynamics and evolution to arrive at a systems theory tracing a continuous line of evolving information sets that connect the Big Bang to the firms and markets of our current socio economic system
