Myths of the Brain Christian Jarrett, 2014-09-02 Great Myths of the Brain introduces readers to the field of neuroscience by examining popular myths about the human brain Explores commonly held myths of the brain through the lens of scientific research backing up claims with studies and other evidence from the literature Looks at enduring myths such as Do we only use 10% of our brain Pregnant women lose their mind Right brained people are more creative and many more Delves into myths relating to specific brain disorders including epilepsy autism dementia and others Written engagingly and accessibly for students and lay readers alike providing a unique introduction to the study of the brain Teaches readers how to spot neuro hype and neuro nonsense claims in the media

The Genealogy of Aesthetics Ekbert Faas, 2002-08-15 Is it body or spirit that makes us appreciate beauty and create art The distinguished Canadian critic Ekbert Faas argues that with occasional exceptions like Montaigne and Mandeville the mainstream of western thinking about beauty from Plato onwards has overemphasised the spirit or even execrated the body and sexuality as inimical to the aesthetic disposition The Genealogy of Aesthetics redresses this imbalance via a radical re reading of seminal thinkers like Plato Augustine Kant Hegel Marx Heidegger and Derrida Professor Faas attacks both the traditional and postmodern consensus and offers a new pro sensualist aesthetics heavily influenced by Nietzsche that draws on contemporary neo Darwinian cognitive science A work of both polemic and considerable learning The Genealogy of Aesthetics marks a radical new departure in thinking about art of interest to all serious students of the humanities and cognitive sciences which no future work in this field can afford to ignore

The Truth about Human Origins Brad Harrub, Bert Thompson, 2003 Ever since Charles Darwin first published The Origin of Species on November 24 1859 the subject of origins has been one of the most controversial topics around Sadly it also is a subject that is fraught with erroneous theories and concepts Most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept Disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong We believe it is time for someone to offer what renowned news commentator Paul Harvey would call the rest of the story That is what The Truth About Human Origins does It tells the rest of the story as it discusses the scientific facts about mankind s beginning For example it investigates the record of the rocks as that record relates to human evolution It demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types It also examines in an in depth fashion the so called molecular evidence of human evolution

Meaningful Information Anthony Reading, 2011-06-16 The book introduces a radically new way of thinking about information and the important role it plays in living systems It opens up new avenues for exploring how cells and organisms change and adapt since the ability to detect and respond to meaningful information is the key that enables them to receive their genetic heritage regulate their internal milieu and respond to changes in their environment It also provides a way of resolving Descartes dilemma by explaining the workings of the brain in non mechanical terms that are not tainted by

spiritual or metaphysical beliefs The types of meaningful information that different species and different cell types are able to detect are finely matched to the ecosystem in which they live for natural selection has shaped what they need to know to function effectively in those circumstances Biological detection and response systems range from the chemical configurations that govern genes and cell life to the relatively simple tropisms that guide single cell organisms the rudimentary nervous systems of invertebrates and the complex neuronal structures of mammals and primates The scope of meaningful information that can be detected and responded to reaches its peak in our own species as exemplified by our special abilities in language cognition emotion and consciousness all of which are explored within this new framework

On High School Teaching: A Guide for the New and Relatively Clueless Joseph Miller, 2012-07-29 A clear well written level headed guide that will help a new or aspiring teacher get off to a solid start in his or her career The author taught high school for 33 years and was honored for his teaching several times including his favorite honor being voted the best veteran teacher in the school by the student body

Life and Mind Jürgen Lawrenz, 2012-12-05 In this bold provocative account the author argues that the phenomena of life and mind elude purely materialistic explanations Living matter occupies a unique phase of existence which results from the complex transformation of its biochemical synergies Analogous phase changes account for mind and self reflexive consciousness A central role in the living state is played by intelligence which has not been recognised as a non negotiable precondition of organic existence Yet the concept of evolutionary adaptivity relies tacitly on it Thus the book amounts to a serious challenge to the overly theoretical paradigmata of the last half century with their timorous evasion of biological fundamentals However although the work relies on up to date research of the life sciences it is a primarily philosophical enquiry dealing head on with many unsolved problems of life and mind and culminating in a detailed ontological proof of the mind system

Metaphysics in the Age of Scientific Hegemony Jürgen Lawrenz, 2023-08-24 This book consists of a series of essays which concern themselves with the persisting relevance of metaphysical speculation in our time It delves into Hegel s politics the ethics of Confucius and Aristotle the research of Leibniz with its astonishing anticipations of modern ideas Wittgenstein s reflections on language the meaning of music and art and a capital instance of a failed enquiry into life and mind from a scientific point of view In all these instances the focus is on the autonomous agency of the human being Metaphysics as a philosophical discipline has long been under fire for its doctrinal presumptions but never more so than under the hegemony of science Yet as the essays in this volume demonstrate it remains an indispensable tool for thinkers in all areas of research in which the human creature is under the spotlight That this involves a reversal of competences has not been seriously accepted predominantly in terms of the gulf between autonomous agency and the mechanistic doxa under which science is compelled to operate This volume seeks to put the torch on these discrepancies where presuppositions end and understanding must take over

Thinking about Other People in Nineteenth-Century British Writing Adela Pinch, 2010-07-08 Nineteenth century life and literature are full of strange accounts that describe the

act of one person thinking about another as an ethically problematic sometimes even a dangerously powerful thing to do In this book Adela Pinch explains why when and under what conditions it is possible or desirable to believe that thinking about another person could affect them She explains why nineteenth century British writers poets novelists philosophers psychologists devotees of the occult were both attracted to and repulsed by radical or substantial notions of purely mental relations between persons and why they moralized about the practice of thinking about other people in interesting ways Working at the intersection of literary studies and philosophy this book both sheds new light on a neglected aspect of Victorian literature and thought and explores the consequences of and the value placed on this strand of thinking about thinking
