, 2001 **Observability and Mathematics** Boris Khots, 2021-11-17 The author approaches an old classic problem the existence of solutions of Navier Stokes equations The main objective is to model and derive of equation of continuity Euler equation of fluid motion energy flux equation Navier Stokes equations from the observer point of view and solve classic problem for this interpretation of fluid motion laws If we have a piece of metal or a volume of liquid the idea impresses itself upon us that it is divisible without limit that any part of it however small would again have the same properties But wherever the methods of research in the physics of matter were refined sufficiently limits to divisibility were reached that are not due to the inadequacy of our experiments but to the nature of the subject matter Observability in mathematics were developed by the author based on denial of infinity idea He introduces observers into arithmetic and arithmetic becomes dependent on observers And after that the basic mathematical parts also become dependent on observers This approach permits to reconsider the fluid motion laws analyze them and get solutions of classic problems Table of Contents 1 Introduction 2 Observability and Arithmetic 3 Observability and Vector Algebra 4 Observability and Mathematical Analysis Calculus 5 Classic Fluid Mechanics equations and Observability 6 Observability and Thermodynamical equations 7 Observability and equation of continuity 8 Observability and Euler equation of motion of the fluid 9 Observability and energy flux and moment flux equations 10 Observability and incompressible fluids 11 Observability and Navier Stokes equations 12 Observability and Relativistic Fluid Mechanics 13 Appendix Review of publications of the Mathematics with Observers 14 Glossary Bibliography Index Biography Boris Khots DrSci lives in Iowa USA Independent Researcher Alma Mater Moscow State Lomonosov University Department of Mathematics and Mechanics mech math Creator of Observer s Mathematics Participant of more than 30 Mathematical international congresses conferences In particular participated with presentation at International Congresses of Mathematicians on 1998 Germany 2002 China 2006 Spain 2010 India 2014 South Korea More than 150 mathematical books and papers **International Year of Global Understanding-2016** Prof. Dr. Mina Vyas, 2019-09-30 Over the last 50 years human activities particularly the burning of fossil fuels have released sufficient quantities of carbon dioxide and other greenhouse gases to trap additional heat in the lower atmosphere and addict the global climate in the last

130 years the world has warmed by approximately 0.85°C. Each of the last 3 decades has been successively warmer than any preceding decade since 1850. The seas levels are rising, glaciers are melting and precipitation patterns are changing. Extreme weather events are becoming more intense and frequent. Although global warming may bring some localized benefits such as fewer winter deaths in temperate climates and increased food production in certain areas, the overall health effects of changing climate are likely to be overwhelmingly negative. Climate change affects social and environmental determinants of health: clean air, safe drinking water, sufficient food and secure shelter.
