Chapter 1

BUSINESS COMBINATIONS

Answers to Questions

- 1 A business combination is a union of business entities in which two or more previously separate and independent companies are brought under the control of a single management team. Three situations establish the control necessary for a business combination, namely, when one or more corporations become subsidiaries, when one company transfers its net assets to another, and when each combining company transfers its net assets to a newly formed corporation.
- 2 The dissolution of all but one of the separate legal entities is *not* necessary for a business combination. An example of one form of business combination in which the separate legal entities are not dissolved is when one corporation becomes a subsidiary of another. In the case of a parent-subsidiary relationship, each combining company continues to exist as a separate legal entity even though both companies are under the control of a single management team.
- 3 A business combination occurs when two or more previously separate and independent companies are brought under the control of a single management team. Merger and consolidation in a generic sense are frequently used as synonyms for the term *business combination*. In a technical sense, however, a *merger* is a type of business combination in which all but one of the combining entities are dissolved and a *consolidation* is a type of business combination in which a new corporation is formed to take over the assets of two or more previously separate companies and all of the combining companies are dissolved.
- 4 Goodwill arises in a business combination accounted for under the acquisition method when the cost of the investment (fair value of the consideration transferred) exceeds the fair value of identifiable net assets acquired. Under GAAP, goodwill is not amortized for financial reporting purposes and will have no effect on net income, unless the goodwill is deemed to be impaired. If goodwill is impaired, a loss will be recognized.
- 5 A bargain purchase occurs when the acquisition price is less than the fair value of the identifiable net assets acquired. The acquirer records the gain from a bargain purchase as an ordinary gain during the period of the acquisition. The gain equals the difference between the investment cost and the fair value of the identifiable net assets acquired.
