Autodesk r CFD software The software provides computational fluid dynamics and thermal simulation tools to predict  
product performance optimize designs and validate product behavior before manufacturing Through a hands on practice  
intensive curriculum students acquire the knowledge required to work in the Autodesk CFD environment to setup and  
conduct thermal and flow analyses on part and assembly models Exercises are provided that cover electronic cooling flow  
control and AEC type models Topics Covered Open and navigate the Autodesk CFD environment to conduct flow and thermal  
analyses on part and assembly models Use the Model Assessment Toolkit to investigate the suitability of model geometry for  
analysis and use Autodesk r SimStudio Tools to make required changes to the CAD geometry Create internal and external  
fluid volumes Setup analyses by applying appropriate materials boundary conditions and mesh settings Refine mesh to obtain  
a proper solution Apply appropriate solver settings to run your analyses and converge to an acceptable solution Use the  
visualization tools to compare summary images summary values and summary plots of your analyses to compare design and  
scenario results of an Autodesk CFD analysis Conduct a final validation of your solution by running through a validation  
checklist Prerequisites This student guide assumes that a student has some Flow and Thermal analysis knowledge and can  
interpret results The main goal of this student guide is to teach a user that is new to the Autodesk CFD software how to  
navigate the interface to successfully analyze a model This student guide was written using the 20160317 build of the  
Autodesk CFD 2017 software The software user interface and workflow may vary if newer versions of the software are being  
used The exercises were completed using the advanced solver license Instructions are provided to complete this class with a  
basic solver license
