

The background of the book cover is a detailed landscape painting. It depicts a mountain valley with a river flowing through it. The foreground is filled with large, light-colored boulders and a small stream. In the middle ground, there are several tall, dark evergreen trees. In the background, there are more mountains under a cloudy sky. A bison is visible in the middle ground, near the river.

Book And Landscape Genetics Concepts Methods Applications:

Landscape Genetics Niko Balkenhol, Samuel Cushman, Andrew Storfer, Lisette Waits, 2015-08-26 Despite the substantial interest in landscape genetics from the scientific community learning about the concepts and methods underlying the field remains very challenging The reason for this is the highly interdisciplinary nature of the field which combines population genetics landscape ecology and spatial statistics These fields have traditionally been treated separately in classes and textbooks and very few scientists have received the interdisciplinary training necessary to efficiently teach or apply the diversity of techniques encompassed by landscape genetics To address the current knowledge gap this book provides the first in depth treatment of landscape genetics in a single volume Specifically this book delivers fundamental concepts and methods underlying the field covering particularly important analytical methods in detail and presenting empirical and theoretical applications of landscape genetics for a variety of environments and species Consistent with the interdisciplinary nature of landscape genetics the book combines an introductory textbook like section with additional sections on advanced topics and applications that are more typical of edited volumes The chapter topics and the expertise of the authors and the editorial team make the book a standard reference for anyone interested in landscape genetics The book includes contributions from many of the leading researchers in landscape genetics The group of scientists we have assembled has worked on several collaborative projects over the last years including a large number of peer reviewed papers several landscape genetics workshops at international conferences and a distributed graduate seminar on landscape genetics Based on the experiences gained during these collaborative teaching and research activities the book includes chapters that synthesize fundamental concepts and methods underlying landscape genetics Part 1 chapters on advanced topics that deserve a more in depth treatment Part 2 and chapters illustrating the use of concepts and methods in empirical applications Part 3 This structure ensures a high usefulness of the book for beginning landscape geneticists and experienced researchers alike so that it has a broad target audience At least one of the four co editors is involved in almost every chapter of the book thereby ensuring a high consistency and coherency among chapters

Landscape Genetics, 2010 **Landscape Genetics** Niko Balkenhol, Samuel Cushman, Andrew Storfer, Lisette Waits, 2015-11-09 LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS Edited by Niko Balkenhol Samuel A Cushman Andrew T Storfer Lisette P Waits Landscape genetics is an exciting and rapidly growing field melding methods and theory from landscape ecology and population genetics to address some of the most challenging and urgent ecological and evolutionary topics of our time Landscape genetic approaches now enable researchers to study in detail how environmental complexity in space and time affect gene flow genetic drift and local adaptation However learning about the concepts and methods underlying the field remains challenging due to the highly interdisciplinary nature of the field which relies on topics that have traditionally been treated separately in classes and textbooks In this edited volume some of the

leading experts in landscape genetics provide the first comprehensive introduction to underlying concepts commonly used methods and current and future applications of landscape genetics Consistent with the interdisciplinary nature of the field the book includes textbook like chapters that synthesize fundamental concepts and methods underlying landscape genetics Part 1 chapters on advanced topics that deserve a more in depth treatment Part 2 and chapters illustrating the use of concepts and methods in empirical applications Part 3 Aimed at beginning landscape geneticists and experienced researchers alike this book will be helpful for all scientists and practitioners interested in learning teaching and applying landscape genetics

Cancer through the Lens of Evolution and Ecology Jason A. Somarelli,Norman A.

Johnson,2024-05-29 Cancer cells exist in an ever changing ecology and are subject to evolutionary pressures just like any species in nature This edited book explores the following themes 1 how the dynamics of mutation epigenetics and gene expression noise are sources of genetic diversity 2 how scarce resources influence cancer therapy resistance 3 how predator prey dynamics are mirrored in immune cancer cross talk 4 how cancer cells parallel niche construction theory 5 how changing fitness landscapes enable cancer growth and 6 how cancer cells interact within the body The book is a resource for understanding cancer as a disease of multicellularity grounded in evolutionary principles By using this knowledge researchers are starting to exploit these behaviors for treatment paradigms Key Features Bridges disciplines exemplifying the ways disparate fields create new perspectives when integrated Offers insights from leading scholars in cancer biology ecology and evolutionary biology Provides a timely recognition by oncologists that evolutionary paradigms are crucial for breakthroughs in cancer treatment Integrates basic and applied sciences of oncology and evolutionary biology

The Least Cost Path From Landscape Genetics to Landscape Genomics Samuel A. Cushman,Andrew J. Shirk,Glenn T. Howe,Melanie A. Murphy,Rodney J. Dyer,Stéphane Joost,2018-08-03 Ecosystems are the stage on which the play of evolution is acted and ecosystems are complex spatially structured and temporally varying The purpose of this Research Topic is to explore critical challenges and opportunities for the transition from landscape genetics to landscape genomics Landscape genetics has focused on the spatial analysis of small genetic datasets typically comprised of less than 20 microsatellite markers taken from clusters of individuals in putative populations or distributed individuals across landscapes The recent emergence of large scale genomic datasets produced by next generation sequencing methods poses tremendous challenge and opportunity to the field Perhaps the greatest is to produce process curate archive and analyze spatially referenced genomic datasets in a way such that research is led by a priori hypotheses regarding how environmental heterogeneity and temporal dynamics interact to affect gene flow and selection The papers in the Research Topic cover a broad range of topics under this area of focus from reviews of the emergence of landscape genetics to best practices in spatial analysis of genetic data The compilation like the emerging field itself is eclectic and illustrates the scope of both the challenges and opportunities of this emerging field
