Security Unbound Jef Huysmans,2014-05-09 Security concerns have mushroomed Increasingly numerous areas of life are governed by security policies and technologies *Security Unbound* argues that when insecurities pervade how we relate to our neighbours how we perceive international politics how governments formulate policies at stake is not our security but our democracy Security is not in the first instance a right or value but a practice that challenges democratic institutions and actions We are familiar with emergency policies in the name of national security challenging parliamentary processes the space for political dissent and fundamental rights Yet security practice and technology pervade society heavily in very mundane ways without raising national security crises in particular through surveillance technology and the management of risks and uncertainties in many areas of life These more diffuse security practices create societies in which suspicion becomes a default way of relating and governing relations ranging from neighbourhood relations over financial transactions to cross border mobility *Security Unbound* demonstrates that governing through suspicion poses serious challenges to democratic practice Some of these challenges are familiar such as the erosion of the right to privacy others are less so such as the post human challenge to citizenship *Security unbound* provokes us to see that the democratic political stake today is not our security but preventing insecurity from becoming the organising principle of political and social life

The Global Politics of Science and Technology - Vol. 2 Maximilian Mayer,Mariana Carpes,Ruth Knoblich,2014-08-20 An increasing number of scholars have begun to see science and technology as relevant issues in International Relations IR acknowledging the impact of material elements technical instruments and scientific practices on international security statehood and global governance This two volume collection brings the debate about science and technology to the center of International Relations It shows how integrating science and technology translates into novel analytical frameworks conceptual approaches and empirical puzzles and thereby offers a state of the art review of various methodological and theoretical ways in which sciences and technologies matter for the study of international affairs and world politics The authors not only offer a set of practical examples of research frameworks for experts and students alike but also propose a conceptual space for interdisciplinary learning in order to improve our understanding of the global

politics of science and technology The second volume raises a plethora of issue areas actors and cases under the umbrella notion techno politics Distinguishing between interactional and co productive perspectives it outlines a toolbox of analytical frameworks that transcend technological determinism and social constructivism

The Chemical Technology of Textile Fibres Georg von Georgievics, 1902 PREFACE IN the present volume dealing with the Chemical Technology of the Textile Fibres except as concerns the dye stuffs which will be treated in a separate work the author has been obliged to con dense the available matter as much as possible in order to preserve the form of a text book Nevertheless it seemed necessary in certain cases in the interests of the book to give definite data and an exact description of individual processes In such instances the details have been gathered exclusively either from the authors personal experience or from reliable sources The most important part of the book is the chapter treating of dyeing whilst on the other hand the subject of printing had to be dealt with in a more general fashion the materials being less suitable for treatment in text book style The author thinks it desirable to point out that in the present work an attempt has been made to completely separate the chemical and mechanical technology of the subject a standpoint he considers justified by the extensive area occupied by each of these branches Hence only a few sketches of apparatus have been given and the methods of dressing the finished goods have been described very briefly since they almost entirely belong to the domain of mechanical technology

The New Media of Surveillance Shoshana Magnet, Kelly Gates, 2013-09-13 The spread of new surveillance technologies is an issue of major concern for democratic societies More ubiquitous and sophisticated monitoring techniques raise profound questions for the very possibility of individual autonomy and democratic government Innovations in surveillance systems require equally innovative

approaches for analyzing their social and political implications and the field of critical communication studies is uniquely equipped to provide fresh insights This book brings together the work of a number of critical communication scholars who take innovative approaches to examining the surveillance dimensions of new media technologies The essays included in this volume focus on interactive networks computer generated imagery biometrics and intelligent transport systems as sites where communication and surveillance have become virtually inseparable social processes This book was originally published as a special issue of The Communication Review Technology of petroleum, by H. Neuburger and H. Noalhat, tr. by J.G.

McIntosh Henry Neuburger,1901 **The chemical technology of textile fibres, tr. by C. Salter** Georg Cornelius T. von Georgievics,1902 Bodies in Code Mark B. N. Hansen,2012-10-02 Bodies in Code explores how our bodies experience and adapt to digital environments Cyberculture theorists have tended to overlook biological reality when talking about virtual reality and Mark B N Hansen s book shows what they ve been missing Cyberspace is anchored in the body he argues and it s the body not high tech computer graphics that allows a person to feel like they are really moving through virtual reality Of course these virtual experiences are also profoundly affecting our very understanding of what it means to live as embodied beings Hansen draws upon recent work in visual culture cognitive science and new media studies as well as examples of computer graphics websites and new media art to show how our bodies are in some ways already becoming virtual
