| Section One: Expressions and Operations                                                    |                            |                                                                                 |                     |
|--------------------------------------------------------------------------------------------|----------------------------|---------------------------------------------------------------------------------|---------------------|
| A.1 (a) Verbal Equations and Expressions                                                   |                            |                                                                                 |                     |
| 1) Which expression represents the difference of nine and half a number?                   |                            | 2) Which verbal equation matches the equation below?<br>$3x + 5 = 10$           |                     |
| A) $9 - 2x$                                                                                |                            | A) The sum of a number and one, multiplied by three, is ten.                    |                     |
| B) $9 - \frac{1}{2}x$                                                                      |                            | B) Three times a number, increased by one, is ten.                              |                     |
| C) $\frac{1}{2}x - 9$                                                                      |                            | C) The quotient of three and a number, increased by one, is ten.                |                     |
| D) $\frac{1}{2}(9 - x)$                                                                    |                            | D) The product of three and a number, decreased by one, is ten.                 |                     |
| A.1 (b) Evaluating Expressions                                                             |                            |                                                                                 |                     |
| 3) Evaluate the expression, given that $a = 3$ , $b = -1$ , and $c = -2$ .                 |                            | 4) Evaluate the expression, given that $x = 3$ and $y = -1$ .                   |                     |
| $(3a - c)^2 + b$                                                                           |                            | $-3(xy + y^2)$                                                                  |                     |
| A) 120                                                                                     | C) 120                     | A) 3                                                                            | C) -9               |
| B) -45                                                                                     | D) 10                      | B) -3                                                                           | D) 9                |
| A.2 (a) Laws of Exponents                                                                  |                            |                                                                                 |                     |
| 5) Which of the following is equivalent to $\frac{x^3y^4}{x^2y^3} \cdot 7$ ?               |                            | 6) Which of the following is equivalent to $(3x^4y^{-1})(2x^2y^3z^5) \cdot 7$ ? |                     |
| A) $\frac{7x}{y}$                                                                          | C) $\frac{7x}{y^2}$        | A) $5x^6y^2$                                                                    | C) $4x^6y^2$        |
| B) $x^2y^{-1}$                                                                             | D) $x^2y^1$                | B) $4x^6y^{-1}z$                                                                | D) 1                |
| A.2 (b) Operations with Polynomials                                                        |                            |                                                                                 |                     |
| 7) Which of the following is equivalent to $(4x^2 + 2x - 7) - (2x^2 - 3x^2 + 4) \cdot 7$ ? |                            | 8) Which of the following is equivalent to $(2x - 3)(2x + 3) \cdot 7$ ?         |                     |
| A) $2x^2 - x - 11$                                                                         | C) $2x^2 - 3x^2 + 2x - 11$ | A) $4x^2 - 5x - 6$                                                              | C) $4x^2 - 13x - 6$ |
| B) $2x^2 + 5x - 9$                                                                         | D) $2x^2 + 3x^2 + 2x - 9$  | B) $5x^2 - 5x - 6$                                                              | D) $4x^2 - 6$       |
