Animal Behavior Desk Reference Edward M. Barrows, 2011-04-26 Words are our tools and as a minimum we should use clean tools We should know what we mean and what we do not and we must forearm ourselves against the traps that language sets us The Need for Precise Terminology Austin 1957 7 8 It follows that for effective and efficient communication people should have or at least understand th

The Development of Evolutionary Genetics Prakash Gorroochurn, 2024-12-28 The book describes the historical development of evolutionary genetics starting from early ideas on evolution and ending with the modern synthesis It provides an extensive coverage of the history of both evolution and heredity and gives detailed descriptions of the works of Lamarck Darwin Mendel Nageli Weismann de Vries Galton Pearson Bateson Johannsen Morgan Fisher Wright and Haldane amongst many others The book does not deal only with a description of historical work it also analyses and critiques existing theories and evolutionary beliefs throughout history and discusses several controversies between biologists

Owned, An Ethological Jurisprudence of Property Johanna Gibson, 2019-12-06 This book draws upon domestication science to undertake a radical reappraisal of the jurisprudence of property and intellectual property Bringing together animal studies and legal philosophy it articulates a critique of dominant property models and relationships from the perspective of cognitive ethology domestication science and animal behaviour In doing so a radical new picture of property emerges Focusing on the emergence of property models through prevailing ideas of human domestication and settlement the book challenges the anthropocentrism that informs standard approaches to ownership and to authorship Utilising a wide range of examples from ethology and animal studies the book thus rethinks the very nature of property as uniquely human This highly original contribution to the fields of property and intellectual property will appeal not

only to legal scholars in these areas as well as in animal law but also to legal theorists and others working in the social sciences with interests in posthumanism and animal studies

The Dwarf and Mouse Lemurs of Madagascar Shawn M. Lehman, Ute Radespiel, Elke Zimmermann, 2016-04-07 The dwarf and mouse lemurs of Madagascar are two very species rich lemur genera yet there is a relative paucity of information on this primate family in published literature In this first ever treatment of the Cheirogaleidae international experts are brought together to review and integrate our current knowledge of the behaviour physiology ecology genetics and biogeography of these species A wide range of direct and indirect research methods that are currently used to study these cryptic nocturnal solitary foragers are described By uniting often disparate research on captive and free ranging taxa and synthesising recent methodological advances this book provides new insights that will encourage further studies of this fascinating primate family This synthesis will provide an incentive for more integrative studies of the Cheirogaleidae in captivity and in the wild enabling the impacts of deforestation and other factors to be identified and directions for future conservation efforts to be established

The Rasputin Effect: When Commensals and Symbionts Become Parasitic Christon J. Hurst, 2016-07-05 This volume focuses on those instances when benign and even beneficial relationships between microbes and their hosts opportunistically change and become detrimental toward the host It examines the triggering events which can factor into these changes such as reduction in the host's capacity for mounting an effective defensive response due to nutritional deprivation coinfections and seemingly subtle environmental influences like the amounts of sunlight temperature and either water or air quality The effects of environmental changes can be compounded when they necessitate a physical relocation of species in turn changing the probability of encounter between microbe and host The change also can result when pathogens including virus species either have modified the opportunist or attacked the host's protective natural microflora The authors discuss these opportunistic interactions and assess their outcomes in both aquatic as well as terrestrial ecosystems highlighting the impact on plant invertebrate and vertebrate hosts

Mimicry and Meaning: Structure and Semiotics of Biological Mimicry Timo Maran, 2017-01-11 The present book analyses critically the tripartite mimicry model consisting of the mimic model and receiver species and develops semiotic tools for comparative analysis It is proposed that mimicry has a double structure where sign relations in communication are in constant interplay with ecological relations between species Multi constructivism and toolbox like conceptual methods are advocated for as these allow taking into account both the participants Umwelten as well as cultural meanings related to specific mimicry cases From biosemiotic viewpoint mimicry is a sign relation where deceptively similar messages are perceived interpreted and acted upon Focusing on living subjects and their communication opens up new ways to understand mimicry Such view helps to explain the diversity of mimicry as well as mimicry studies and treat these in a single framework On a meta level a semiotic view allows critical reflection on the use of mimicry concept in modern biology The author further discusses interpretations of mimicry in contemporary semiotics analyses mimicry as communicative interaction relates

mimicry to iconic signs and focuses on abstract resemblances in mimicry Theoretical discussions are illustrated with detailed excursions into practical mimicry cases in nature brood parasitism eyespots myrmecomorphy etc The book concludes with a conviction that mimicry should be treated in a broader semiotic ecological context as it presumes the existence of ecological codes and other sign conventions in the ecosystem
