Engineering Intelligent Systems Barclay R. Brown, 2022-10-04 Engineering Intelligent Systems Exploring the three key disciplines of intelligent systems As artificial intelligence AI and machine learning technology continue to develop and find new applications advances in this field have generally been focused on the development of isolated software data analysis systems or of control systems for robots and other devices By applying model based systems engineering to AI however engineers can design complex systems that rely on AI based components resulting in larger more complex intelligent systems that successfully integrate humans and AI Engineering Intelligent Systems relies on Dr Barclay R Brown s 25 years of experience in software and systems engineering to propose an integrated perspective to the challenges and opportunities in the use of artificial intelligence to create better technological and business systems While most recent research on the topic has focused on adapting and improving algorithms and devices this book puts forth the innovative idea of transforming the systems in our lives our societies and our businesses into intelligent systems At its heart this book is about how to combine systems engineering and systems thinking with the newest technologies to design increasingly intelligent systems Engineering Intelligent Systems readers will also find An introduction to the fields of artificial intelligence with machine learning model based systems engineering MBSE and systems thinking the key disciplines for making systems smarter An example of how to build a deep neural network in a spreadsheet with no code or specialized mathematics required An approach to the visual representation of systems using techniques from moviemaking storytelling visual systems design and model based systems engineering An analysis of the potential ability of computers to think understand and become conscious and its implications for artificial intelligence Tools to allow for easier collaboration and communication among developers and engineers allowing for better understanding between stakeholders and creating a faster development cycle A systems thinking approach to people systems systems that consist only of people and which form the basis for our organizations communities and society Engineering Intelligent Systems offers an intriguing new approach to making systems more intelligent using artificial intelligence machine learning systems thinking and system modeling and therefore will be of interest to all engineers and business professionals particularly systems engineers **Evidence-Based Health**

Informatics Elske Ammenwerth, 2016-05-15 Health IT is a major field of investment in support of healthcare delivery but patients and professionals tend to have systems imposed upon them by organizational policy or as a result of even higher policy decision. And while many health IT systems are efficient and welcomed by their users and are essential to modern healthcare, this is not the case for all. Unfortunately, some systems cause user frustration and result in inefficiency in use, and a few are known to have inconvenienced patients or even caused harm, including the occasional death. This book seeks to answer the need for better understanding of the importance of robust evidence to support health IT and to optimize investment in it to give insight into health IT evidence and evaluation as its primary source and to promote health informatics as an underpinning science demonstrating the same ethical rigour and proof of net benefit as is expected of other applied health technologies. The book is divided into three parts: the context and importance of evidence-based health informatics; methodological considerations of health IT evaluation as the source of evidence; and ensuring the relevance and application of evidence. A number of cross-cutting themes emerge in each of these sections. This book seeks to inform the reader on the wide range of knowledge available and the appropriateness of its use according to the circumstances. It is aimed at a wide readership and will be of interest to health policymakers, clinicians, health informaticians, the academic health informatics community, members of patient and policy organisations, and members of the vendor industry.
