Artificial War Multiagent Based Simulation Of Combat:

Artificial War: Multiagent-based Simulation Of Combat Andrew Ilachinski, 2004-06-14 Military conflicts particularly land combat possess the characteristics of complex adaptive systems combat forces are composed of a large number of nonlinearly interacting parts and are organized in a dynamic command and control network local action which often appears disordered self organizes into long range order military conflicts by their nature proceed far from equilibrium military forces adapt to a changing combat environment and there is no master voice that dictates the actions of every soldier i e battlefield action is decentralized Nonetheless most modern state of the art military simulations ignore the self organizing properties of combat This book summarizes the results of a multiyear research effort aimed at exploring the applicability of complex adaptive systems theory to the study of warfare and introduces a sophisticated multiagent based simulation of combat called EINSTEIN EINSTEIN whose bottom up generative approach to modeling combat stands in stark contrast to the top down or reductionist philosophy that still underlies most conventional military models is designed to illustrate how many aspects of land combat may be understood as self organized emergent phenomena Used worldwide by the military operations research community EINSTEIN has pioneered the simulation of combat on a small to medium scale by using autonomous agents to model individual behaviors and personalities rather than hardware

Engineering Principles of Combat Modeling and Distributed Simulation Andreas Tolk, 2012-03-20 Explore the military and combat applications of modeling and simulation Engineering Principles of Combat Modeling and Distributed Simulation is the first book of its kind to address the three perspectives that simulation engineers must master for successful military and defense related modeling the operational view what needs to be modeled the conceptual view how to do combat modeling and the technical view how to conduct distributed simulation Through methods from the fields of operations research computer science and engineering readers are guided through the history current training practices and modern methodology related to combat modeling and distributed simulation systems Comprised of contributions from leading international researchers and practitioners this book provides a comprehensive overview of the engineering principles and state of the art methods needed to address the many facets of combat modeling and distributed simulation and features the following four sections Foundations introduces relevant topics and recommended practices providing the needed basis for understanding the challenges associated with combat modeling and distributed simulation Combat Modeling focuses on the challenges in human social cultural and behavioral modeling such as the core processes of move shoot look and communicate within a synthetic environment and also equips readers with the knowledge to fully understand the related concepts and limitations Distributed Simulation introduces the main challenges of advanced distributed simulation outlines the basics of validation and verification and exhibits how these systems can support the operational environment of the warfighter Advanced Topics highlights new and developing special topic areas including mathematical applications fo combat modeling combat modeling with high level architecture and base object

models and virtual and interactive digital worlds Featuring practical examples and applications relevant to industrial and government audiences Engineering Principles of Combat Modeling and Distributed Simulation is an excellent resource for researchers and practitioners in the fields of operations research military modeling simulation and computer science Extensively classroom tested the book is also ideal for courses on modeling and simulation systems engineering and combat modeling at the graduate level *Computational Intelligence in Archaeology* Barcelo, Juan A.,2008-07-31 Provides analytical theories offered by innovative artificial intelligence computing methods in the archaeological domain Artificial Whiteness Yarden Katz,2020-11-17 Dramatic statements about the promise and peril of artificial intelligence for humanity abound as an industry of experts claims that AI is poised to reshape nearly every sphere of life Who profits from the idea that the age of AI has arrived Why do ideas of AI s transformative potential keep reappearing in social and political discourse and how are they linked to broader political agendas Yarden Katz reveals the ideology embedded in the concept of artificial intelligence contending that it both serves and mimics the logic of white supremacy He demonstrates that understandings of AI as a field and a technology have shifted dramatically over time based on the needs of its funders and the professional class that formed around it From its origins in the Cold War military industrial complex through its present day Silicon Valley proselytizers and eager policy analysts AI has never been simply a technical project enabled by larger data and better computing Drawing on intimate familiarity with the field and its practices Katz instead asks us to see how AI reinforces models of knowledge that assume white male superiority and an imperialist worldview Only by seeing the connection between artificial intelligence and whiteness can we prioritize alternatives to the conception of AI as an all encompassing technological force Bringing together theories of whiteness and race in the humanities and social sciences with a deep understanding of the history and practice of science and computing Artificial Whiteness is an incisive urgent critique of the uses of AI as a political tool to uphold social hierarchies Advanced Methods and Technologies for Agent and Multi-Agent Systems D. Barbucha,M.T. Le,R.J. Howlett,2013-05-14 The field of agent and multi agent systems is concerned with the development and evaluation of sophisticated AI based problem solving and control architectures for both single and multi agent systems This book presents the proceedings of the 7th KES Conference on Agent and Multi agent Systems Technologies and Applications KES AMSTA 2013 held in Hue City Vietnam in May 2013 The KES AMSTA 2013 conference provides an internationally respected forum for scientific research in the technologies and applications of agent and multi agent systems In all 44 papers were selected for oral presentation and publication in this volume Special attention is paid to the feature topics of intelligent technologies and applications in the area of e health social networking self organizing systems economics and trust management Other topics covered include agent oriented software engineering beliefs engineering desires and intentions representation agent cooperation coordination negotiation organization and communication distributed problem solving specification of agent communication languages formalization of ontologies and conversational agents The book highlights new trends and

challenges in agent and multi agent research and will be of interest to the research community working in the fields of artificial intelligence collective computational intelligence robotics dialogue systems and in particular agent and multi agent systems technologies and applications

Research Anthology on Military and Defense Applications, Utilization, Education, and Ethics Management Association, Information Resources, 2021-05-28 Military technology is highly advanced in terms of technology being used in the field computer applications artificial intelligence and software applications These high performance technologies range from weapons to communications technology to automation in vehicles and weaponry These technologies must be both secure and reliable in harsh environments Research is being focused specifically on that including how military and defense applications operate what modern technologies are being used and the ethics surrounding these applications A holistic view of these applications is necessary for both understanding current military tactics and tools along with the future applications The *Research Anthology on Military and Defense Applications Utilization Education and Ethics* focuses specifically on military and defense operations expenditure technologies and tools and the ethics surrounding technologies like weaponry and artificial intelligence in the military The chapters cover a wide and diverse range of military and defense applications while providing crucial information on the functions security and reliability of these technologies Beyond an understanding of the applications themselves this book also focuses on military education surrounding these technologies and the ethics of usage to provide a well rounded understanding of research in the field This book is ideal for military consultants military personnel defense agencies national security agencies government officials defense personnel policymakers military educators and trainers stakeholders practitioners researchers academicians and students interested in the latest research in military and defense applications

Applications of Information Systems to Homeland Security and Defense Abbass, Hussein A., Essam, Daryl, 2005-09-30 This book provides an overview of complex systems techniques and presents both guidelines and specific instances of how they can be applied to security and defense applications Provided by publisher

Discrete-Event Modeling and Simulation Gabriel A. Wainer, 2017-12-19 Complex artificial dynamic systems require advanced modeling techniques that can accommodate their asynchronous concurrent and highly non linear nature Discrete Event systems Specification DEVS provides a formal framework for hierarchical construction of discrete event models in a modular manner allowing for model re use and reduced development time Discrete Event Modeling and Simulation presents a practical approach focused on the creation of discrete event applications The book introduces the CD tool an open source framework that enables the simulation of discrete event models After setting up the basic theory of DEVS and Cell DEVS the author focuses on how to use the CD tool to define a variety of models in biology physics chemistry and artificial systems They also demonstrate how to map different modeling techniques such as Finite State Machines and VHDL to DEVS The in depth coverage elaborates on the creation of simulation software for DEVS models and the 3D visualization environments associated with these tools A much needed practical approach to creating discrete event applications this book

offers world class instruction on the field's most useful modeling tools *Recent Advances In Artificial Life* Hussein A Abbass, Terry Bossomaier, Janet Wiles, 2005-11-04 Artificial life is now a recognized discipline of research with many important applications and software tools However many theoretical issues remain unresolved This book brings together a cross section of key developments in artificial life which in turn gives us new insight into the theory of complex systems The central ideas of the book surround genetics and evolution in an artificial life framework Topics covered include maintenance of genetic diversity hierarchical structures and stability of ecosystems Underpinning these topics are key theoretical developments surrounding network complexity the development of pattern languages for complex networks and a deeper understanding of the edge of chaos where complex systems live Practical applications include optimization gene regulatory networks modeling the spread of disease and the evolution of ageing The reader will gain an insight into the mathematical techniques at the core of artificial life and encounter a sufficient diversity of applications to stimulate new directions in their own field *Defence Applications of Multi-Agent Systems* Simon G. Thompson, Robert Ghanea-Hercock, 2006-02-28 This book constitutes the thoroughly refereed post proceedings of the International Workshop on Defence Applications of Multi Agent Systems DAMAS 2005 held in July 2005 as an associated event of AAMAS 2005 The ten revised full papers presented together with one invited article are organized in topical sections on decision support and simulation unmanned aerial vehicles as well as on systems and security
