web circular motion is described as a movement of an object while rotating along a circular path circular motion can be either uniform or non uniform during uniform circular motion the angular rate of rotation and speed will be constant while during non uniform motion the rate of rotation keeps changing

web t angular velocity define an angular velocity ω angular displacement ω time interval uniform circular motion is when ω is constant combining last 3 equations $r\omega$ period $t = 2\pi / \omega$ $\theta = \omega t$ question you place a beetle on a uniformly rotating record is the beetle s tangential velocity different or the same at different radial positions

6 1 introduction to circular motion physics libretexts - Feb 09 2023

web jul 20 2022 we shall begin by describing the kinematics of circular motion the position velocity and acceleration as a special case of two dimensional motion we will see that unlike linear motion where velocity and acceleration are directed along the line of motion in circular motion the direction of velocity is always tangent to the circle

dynamics of circular motion uniform circular motion physics - Aug 03 2022

web dynamics of circular motion we know that circular motion can be both uniform and non uniform if the tangential component of acceleration is absent it will be uniform circular motion and if the tangential component of acceleration is present it will be non uniform circular motion
