National Bureau of Standards,1987 *Networking in Open Systems* Günter Müller,Robert P. Blanc,1987-03-25 The contributions provide an overview of research in telecommunications and distributed systems The main part concentrates on the evaluation of the CCITT recommendations and ISO standards with respect to OSI and ISDN and user services It also reviews new applications that are becoming available in modern offices manufacturing and the public domain Different approaches are discussed as to how these applications can be built more easily with advanced programming tools Deals with operating systems support for communication systems **Argus Reference Manual** ,1987 Argus is an experimental language system designed to support the construction and execution of distributed programs Argus is intended to support only a subset of the applications that could benefit from being implemented by a distributed program Two properties distinguish these applications they make use of online data that must remain consistent in spite of concurrency and hardware failures and they provide services under real time constraints that are not severe Examples of such applications are office automation systems and banking systems Argus is based on CLU It is largely an extension of CLU but there are number of differences Like CLU Argus provides procedures for procedural abstraction iterators for control abstraction and clusters for data abstraction In addition Argus provides guardians that encapsulate and control access to one or more resources Argus also provides equate modules as a convenient way to refer to constants As in CLU modules may be parameterized so that a single module can define a class of related abstractions Keywords Fault tolerant computing *Preliminary Argus Reference Manual* E.
