Graph Theory for Programmers Victor N. Kasyanov, Vladimir A. Evstigneev, 2000-08-31 This introductory book treats algorithmic graph theory specifically for programmers It explores some key ideas and basic algorithms in this large and rapidly growing field and contains high level and language independent descriptions of methods and algorithms on trees the most important type of graphs in programming and informatics Readers are assumed to be familiar with the basics of graph theory and programming Audience This volume will be of interest to researchers and specialists in programming software engineering data structure and information retrieval and to mathematicians whose work involves algorithms combinatorics graph theory operations research and discrete optimization The book can also be recommended as a text for graduate courses in computer science electronics telecommunications and control engineering

Graph Theory for Programmers Victor N. Kasyanov, Vladimir A. Evstigneev, 2000-09-14 In delivering lectures and writing books we were most often forced to pay absolutely no attention to a great body of interesting results and useful algorithms appearing in numerous sources and occasionally encountered It was

absolutely that most of these results would finally be forgotten because it is impossible to run through the entire variety of sources where these materials could be published. Therefore we decided to do what we can to correct this situation. We discussed this problem with Ershov and came to an idea to write an encyclopedia of algorithms on graphs focusing our main attention on the algorithms already used in programming and their generalizations or modifications. We thought that it is reasonable to group all graphs into certain classes and place the algorithms developed for each class into a separate book. The existence of trees, i.e. a class of graphs especially important for programming, also supported this decision. This monograph is the first but as we hope not the last book written as part of our project. It was preceded by two books: *Algorithms on Trees* 1984 and *Algorithms of Processing of Trees* 1990, small editions of which were published at the Computer Center of the Siberian Division of the Russian Academy of Sciences. The books were distributed immediately and this made out our decision to prepare a combined monograph on the basis of these books even stronger.

Applied Graph Theory in Computer Vision and Pattern Recognition Abraham Kandel, Horst Bunke, 2007-03-12. This book presents novel graph theoretic methods for complex computer vision and pattern recognition tasks. It presents the application of graph theory to low level processing of digital images, presents graph theoretic learning algorithms for high level computer vision and pattern recognition applications, and provides detailed descriptions of several applications of graph based methods to real world pattern recognition tasks.

Graphs, Networks and Algorithms Dieter Jungnickel, 2013-06-29. From the reviews of the German edition: Combinatorial optimization along with graph algorithms and complexity theory is booming. This book treats the most prominent problems which are polynomially solvable. The Traveling Salesman Problem is discussed as a paradigm of an NP complete problem. The text is well written, most exercises are quite enlightening and the hints are clear. Algorithms are described very thoroughly. The list of references is impressive and gives good guidance for further reading. The book can be recommended to beginners as an introductory text as well as for research and industry as a reference.

OPTIMA In this corrected 2nd printing of the first edition the author has made some small modifications, some minor mistakes were corrected and updates to the bibliography provided.

advanced graph algorithms , The Algorithm Design Manual Steven S Skiena, 2009-04-05. This newly expanded and updated second edition of the best selling classic continues to take the mystery out of designing algorithms and analyzing their efficacy and efficiency. the first edition Provides full online support for lecturers and a completely updated and improved website component with lecture slides audio and video Contains a unique catalog identifying the 75 algorithmic problems that arise most often in practice leading the reader down the right path to solve them Includes several NEW war stories relating experiences from real world applications Provides up to date links leading to the very best algorithm implementations available in C C and Java

Graph-Theoretic Concepts in Computer Science Juraj Hromkovič, Manfred Nagl, Bernhard Westfechtel, 2005-01-25 During its 30 year existence the International Workshop on Graph Theoretic Concepts in Computer Science has become a distinguished and high quality computer science event The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can successfully be applied to various areas of computer science and by exposing new theories emerging from applications In this way WG provides a common ground for the exchange of information among people dealing with several graph problems and working in various disciplines Thereby the workshop contributes to forming an interdisciplinary research community The original idea of the Workshop on Graph Theoretic Concepts in Computer Science was ingenuity in all theoretical aspects and applications of graph concepts wherever applied Within the last ten years the development has strengthened in particular the topic of structural graph properties in relation to computational complexity This workshop has become pivotal for the community interested in these areas An aim specific to the 30th WG was to support the central role of WG in both of the prementioned areas on the one hand and on the other hand to promote its originally broader scope The 30th WG was held at the Physikzentrum Bad Honnef which serves as the main meeting point of the German Physical Society It offers a secluded setting for research conferences seminars and workshops and has proved to be especially stimulating for fruitful discussions Talks were given in the new lecture hall with a modern double rear projection interactive electronic board and full video conferencing equipment

Experimental Algorithms Carme Álvarez, Maria Serna, 2006-05-20 This book constitutes the refereed proceedings of the 5th International Workshop on Experimental and Efficient Algorithms WEA 2006 held in Menorca Spain May 2006 The book presents 26 revised full papers together with 3 invited talks The application areas addressed include most fields applying advanced algorithmic techniques such as combinatorial optimization approximation graph theory discrete mathematics scheduling searching sorting string matching coding networking and more
