sanitary controls Foods undergo deterioration of varying degrees in their sensory characteristics nutritional value safety and aesthetic appeal Most foods from the time they are harvested slaughtered or manufactured undergo progressive deterioration that depending upon the food may be very slow or so rapid as to render the food virtually useless in a matter of hours This presents a problem to the Department of Defense because food supplies have to be purchased well in advance of anticipated usage Large quantities of food are lost each year due to deterioration The problem is due to the perishable nature of food as well as to the rather lengthy Defense subsistence supply chain Due to these factors veterinary food inspection specialists are tasked with recognizing deterioration in subsistence and making recommendations to preclude public health problems and financial losses to the Government How do bacteria reproduce Does the bacterial cell contain a nucleus What are the shapes of bacteria If you cannot answer these questions now you should be able to when you have completed this course and you should also know the answers to many other questions For those of you who already know this material let it serve as a review Why are we interested in bacteria Because some bacteria are capable of waging war on the human race and some bacteria are capable of benefiting our lives We need to know the difference Bacteria are microorganisms and microorganisms are the smallest of all organisms for example 2 000 of them can be lined up across the head of a common pin In this subcourse we will be concerned with those tiny organisms that are unfriendly because they are responsible for a large percentage of spoilage in foods We believe it is important to know about those microorganisms that cause food deterioration so that we can eliminate deterioration in foods before it occurs
