Building Software Tools for Combat Modeling and Analysis Yuanxin Chen, Naval Postgraduate School (U.S.), 2004-12-01
The focus of this thesis is to use and leverage the strengths of dynamic computer program analysis methodologies in software engineering testing and debugging such as program behavior modeling and event grammars to automate the building and analysis of combat simulations An original high level language METALS Meta Language for Combat Simulations and its associated parser and C code generator were designed to reduce the amount of time and developmental efforts needed to build sophisticated real world combat simulations A C simulation of the Navy s current mine avoidance problem in littoral waters was generated using high level METALS description in the thesis as a demonstration The software tools that were developed will allow users to focus their attention and efforts in the problem domain while sparing them to a considerable extent the rigors of detailed implementation

McMillan,David Beevis,Eduardo Salas,2013-06-29 The human factors profession is currently attempting to take a more proactive role in the design of man machine systems than has been characteristic of its past Realizing that human engineering contributions are needed well before the experimental evaluation of prototypes or operational systems there is a concerted effort to develop tools that predict how humans will interact with proposed designs This volume provides an over view of one category of such tools mathematical models of human performance It represents a collection of invited papers from a 1988 NATO Workshop The Workshop was conceived and organized by NATO Research Study Group 9 RSG 9 on Modelling of Human Operator Behaviour in Weapon Systems It represented the culmination of over five years of effort and was attended by 139 persons from Europe Canada and the United States RSG 9 was established in 1982 by Panel 8 of the Defence Research Group to accomplish the following objectives Determine the utility and state of the art of human performance modelling Encourage international research and the exchange of ideas Foster the practical application of modelling research Provide a bridge between the models and approaches adopted by engineers and behavioral scientists Present the findings in an international symposium

Masters Theses in the Pure and Applied Sciences Wade H. Shafer,2012-12-06 Masters Theses in the Pure and Applied Sciences was first conceived published and disseminated by the Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the activity were transferred to University Microfilms Xerox of Ann Arbor Michigan

with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 38 thesis year 1993 a total of 13 787 thesis titles from 22 Canadian and 164 United States universities We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work While Volume 38 reports theses submitted in 1993 on occasion certain universities do report theses submitted in previous years but not reported at the time
