A New Branch Of Mathematics The Ausdehnungslehre Of 1844 And Other Works:

A New Branch of Mathematics Hermann Grassmann, 1995 This is a translation of the work of Grassmann a 19th century mathematician who is acknowledged as one of the founders of vector analysis His ideas have recently been applied in elementary particle physics and computer sciences as well as in analytic geometry

Landmark Writings in Western Mathematics 1640-1940 Ivor Grattan-Guinness, 2005-02-11 This book contains around 80 articles on major writings in mathematics published between 1640 and 1940 All aspects of mathematics are covered pure and applied probability and statistics foundations and philosophy Sometimes two writings from the same period and the same subject are taken together The biography of the author s is recorded and the circumstances of the preparation of the writing are given When the writing is of some lengths an analytical table of its contents is supplied The contents of the writing is reviewed and its impact described at least for the immediate decades Each article ends with a bibliography of primary and secondary items First book of its kind Covers the period 1640 1940 of massive development in mathematics Describes many of the main writings of mathematics Articles written by specialists in their field

The Prehistory of Mathematical Structuralism Erich H. Reck, Georg Schiemer, 2020 This edited volume explores the previously underacknowledged pre history of mathematical structuralism showing that structuralism has deep roots in the history of modern mathematics The contributors explore this history along two distinct but interconnected dimensions First they reconsider the methodological contributions of major figures in the history of mathematics Second they re examine a range of philosophical reflections from mathematically inclined philosophers like Russell Carnap and Quine whose work led to profound conclusions about logical epistemological and metaphysical aspects of structuralism

Programs as Diagrams Dusko Pavlovic, 2023-09-19 It is not always clear what computer programs mean in the various languages in which they can be written yet a picture can be worth 1000 words a diagram 1000 instructions In this unique textbook reference programs are drawn as string diagrams in the language of categories which display a universal syntax of mathematics Computer scientists use them to analyze the program semantics programmers to display the syntax of computations Here the string diagrammatic depictions of computations are construed as programs in a single instruction programming language Such programs as diagrams show how functions are packed in boxes and tied by strings Readers familiar with categories will learn about the foundations of computability readers familiar with computability gain access to category theory Additionally readers familiar with both are offered many opportunities to improve the approach Topics and features Delivers a crash diagram based course in theory of computation Uses single instruction diagrammatic programming language Offers a practical introduction into categories and string diagrams as computational tools Reveals how computability is programmability rather than an ether permeating computers Provides a categorical model of intensional computation is unique up to isomorphism Serves as a stepping stone into research of computable categories In addition to its early chapters introducing computability for beginners this flexible textbook

resource also contains both middle chapters that expand for suitability to a graduate course as well as final chapters opening up new research Dusko Pavlovic is a professor at the Department of Information and Computer Sciences at the University of Hawaii at Manoa and by courtesy at the Department of Mathematics and the College of Engineering He completed this book as an Excellence Professor at Radboud University in Nijmegen The Netherlands **Galileo Unbound** David D.

Nolte,2018-07-12 Galileo Unbound traces the journey that brought us from Galileo's law of free fall to today's geneticists measuring evolutionary drift entangled quantum particles moving among many worlds and our lives as trajectories traversing a health space with thousands of dimensions Remarkably common themes persist that predict the evolution of species as readily as the orbits of planets or the collapse of stars into black holes This book tells the history of spaces of expanding dimension and increasing abstraction and how they continue today to give new insight into the physics of complex systems Galileo published the first modern law of motion the Law of Fall that was ideal and simple laying the foundation upon which Newton built the first theory of dynamics Early in the twentieth century geometry became the cause of motion rather than the result when Einstein envisioned the fabric of space time warped by mass and energy forcing light rays to bend past the Sun Possibly more radical was Feynman's dilemma of quantum particles taking all paths at once setting the stage for the modern fields of quantum field theory and quantum computing Yet as concepts of motion have evolved one thing has remained constant the need to track ever more complex changes and to capture their essence to find patterns in the chaos as we try to predict and control our world A New Approach to Differential Geometry using Clifford's Geometric Algebra John

Snygg,2011-12-08 Differential geometry is the study of the curvature and calculus of curves and surfaces A New Approach to Differential Geometry using Clifford's Geometric Algebra simplifies the discussion to an accessible level of differential geometry by introducing Clifford algebra This presentation is relevant because Clifford algebra is an effective tool for dealing with the rotations intrinsic to the study of curved space Complete with chapter by chapter exercises an overview of general relativity and brief biographies of historical figures this comprehensive textbook presents a valuable introduction to differential geometry It will serve as a useful resource for upper level undergraduates beginning level graduate students and researchers in the algebra and physics communities **Topological (in) Hegel** Borislav G. Dimitrov,2018-01-23 The aim of

this book is to critically examine whether it is methodologically possible to combine mathematical rigor topology with a systematic dialectical methodology in Hegel and if so to provide as result of my interpretation the outline of Hegel's Analysis Situs also with the proposed models build on the topological manifold cobordism topological data analysis persistent homology simplicial complexes and graph theory to provide an indication of how the merger of Hegel's dialectical logic and topology may be instrumental to a systematic logician and of how a systematic dialectical logic perspective may help mathematical model builders Quantum Interaction Harald Atmanspacher,Emmanuel Haven,Kirsty Kitto,Derek

Raine,2014-04-17 This book constitutes the refereed proceedings of the 7th International Conference on Quantum Interaction

QI 2013 held in Leicester UK in July 2013 The 31 papers presented in this book were carefully selected from numerous submissions The papers cover various topics on quantum interaction and revolve around four themes information processing retrieval semantic representation and logic cognition and decision making finance economics and social structures and biological systems **Kyoto in Davos. Intercultural Readings of the Cassirer-Heidegger Debate** ,2023-12-28 What does it mean to be human We invite the reader to discuss this most fundamental issue in philosophy and to do so in an intercultural framework The question of the human was the starting point for a legendary discussion between two German philosophers who met in Davos in 1929 We return to this historical event and re imagine the debate between Martin Heidegger and Ernst Cassirer from a global perspective Generating twenty papers from elaborate discussions our authors contribute to the thought experiment by inviting the Japanese philosopher Nishida Kitar from Kyoto and other Japanese thinkers into the debate to overcome the challenge of Eurocentrism inherent to these historic days in Davos From Chemistry to Consciousness Harald Atmanspacher,Ulrich Müller-Herold,2016-09-20 This book reflects on the significant and highly original scientific contributions of Hans Primas A professor of chemistry at ETH Zurich from 1962 to 1995 Primas continued his research activities until his death in 2014 Over these 50 years and more he worked on the foundations of nuclear magnetic resonance spectroscopy contributed to a number of significant issues in theoretical chemistry helped to clarify central topics in quantum theory and the philosophy of physics suggested innovative ways of addressing interlevel relations in the philosophy of science and introduced cutting edge approaches in the flourishing young field of scientific studies of consciousness His work in these areas of research and its continuing impact is described by noted experts colleagues and collaborators of Primas All authors contextualize their contributions to facilitate the mutual dialog between these fields
