

The background of the entire cover is a photograph of a city, likely Rio de Janeiro, with a dense, colorful hillside of buildings. The sky above the city is a deep blue with a large, dark, swirling cloud formation that resembles a hurricane or a massive storm system, with some lighter clouds catching the light.

A Pivotal Moment Population Justice And The Environmental Challenge:

A Pivotal Moment Laurie Ann Mazur, 2012-09-26 With contributions by leading demographers environmentalists and reproductive health advocates *A Pivotal Moment* offers a new perspective on the complex connection between population dynamics and environmental quality It presents the latest research on the relationship between population growth and climate change ecosystem health and other environmental issues It surveys the new demographic landscape in which population growth rates have fallen but human numbers continue to increase It looks back at the lessons of the last half century while looking forward to population policies that are sustainable and just *A Pivotal Moment* embraces the concept of population justice which holds that inequality is a root cause of both rapid population growth and environmental degradation By addressing inequality both gender and economic we can reduce growth rates and build a sustainable future

The SAGE Handbook of Action Research Hilary Bradbury, 2015-06-19 The third edition of *The SAGE Handbook of Action Research* presents an updated version of the bestselling text including new chapters covering emerging areas in healthcare social work education and international development as well as an expanded skills section which includes new consultant relevant materials Building on the strength of the previous landmark editions Hilary Bradbury has carefully developed this edition to ensure it follows in their footsteps by mapping the current state of the discipline as well as looking to the future of the field and exploring the issues at the cutting edge of the action research paradigm today This volume is an essential resource for scholars and professionals engaged in social and political inquiry healthcare international development new media organizational research and education

Defensive Environmentalists and the Dynamics of Global Reform Thomas Rudel, 2013-03-11 As global environmental changes become increasingly evident and efforts to respond to these changes fall short of expectations questions about the circumstances that generate environmental reforms become more pressing *Defensive Environmentalists and the Dynamics of Global Reform* answers these questions through a historical analysis of two processes that have contributed to environmental reforms one in which people become defensive environmentalists concerned about environmental problems close to home and another in which people become altruistic environmentalists intent on alleviating global problems after experiencing catastrophic events such as hurricanes droughts and fires These focusing events make reform more urgent and convince people to become altruistic environmentalists Bolstered by defensive environmentalists the altruists gain strength in environmental politics and reforms occur

Is the Planet Full? Ian Goldin, 2014-05-15 What are the impacts of population growth Can our planet support the demands of the ten billion people anticipated to be the world's population by the middle of this century While it is common to hear about the problems of overpopulation might there be unexplored benefits of increasing numbers of people in the world How can we both consider and harness the potential benefits brought by a healthier wealthier and larger population May more people mean more scientists to discover how our world works more inventors and thinkers to help solve the world's problems more skilled

people to put these ideas into practice In this book leading academics with a wide range of expertise in demography philosophy biology climate science economics and environmental sustainability explore the contexts costs and benefits of a burgeoning population on our economic social and environmental systems

Enough of Us Cheryl Levinson, Ellis Levinson, 2013-02 Couples without children continue to be viewed as strange and too often they're only just tolerated But Cheryl and Ellis Levinson a married couple who have lived childfree for twenty eight years don't just defend those who refrain from having children they celebrate them They also argue that society doesn't treat childfree couples fairly and that many couples with children are putting the world at risk Overpopulation poses real dangers including an increased threat of climate change accelerated animal and plant extinctions and the wholesale destruction of rainforests and other habitats The Levinsons explore the increasingly common choice to remain childfree and challenge the ethics of those who choose to procreate They consider a host of issues including liabilities facing children motivations to have children financial implications lack of parental preparation nature versus nurture and world sustainability Despite the dangers of overpopulation many people continue to have children without thinking through the consequences It's time to take a larger view and consider whether or not there are Enough of Us

What's Wrong with Climate Politics and How to Fix It Paul G. Harris, 2013-07-11 Governments have failed to stem global emissions of carbon dioxide and other greenhouse gases causing climate change Indeed climate changing pollution is increasing globally and will do so for decades to come without far more aggressive action What explains this failure to effectively tackle one of the world's most serious problems And what can we do about it To answer these questions Paul G Harris looks at climate politics as a doctor might look at a very sick patient He performs urgent diagnoses and prescribes vital treatments to revive our ailing planet before it's too late The book begins by diagnosing what's most wrong with climate politics including the anachronistic international system which encourages nations to fight for their narrowly perceived interests and makes major cuts in greenhouse pollution extraordinarily difficult the deadlock between the United States and China which together produce over one third of global greenhouse gas pollution but do little more than demand that the other act first and affluent lifestyles and overconsumption which are spreading rapidly from industrialized nations to the developing world The book then prescribes several remedies for the failed politics of climate change including a new kind of climate diplomacy with people at its center national policies that put the common but differentiated responsibilities of individuals alongside those of nations and a campaign for simultaneously enhancing human wellbeing and environmental sustainability While these treatments are aspirational they are not intended to be utopian As Harris shows they are genuine workable solutions to what ails the politics of climate change today

Society and the Environment Michael S Carolan, 2020-03-10 Without focusing entirely on what is wrong with the world around us the third edition of *Society and the Environment* centers its discussion on realistic solutions to the problems that persist and examines current controversies within a socio-organizational context After introducing pragmatic

environmentalism Carolan discusses the complex pressures and variables that exist where ecology and society collide such as population growth and the concurrent increase in demands for food and energy and transportation and its outsized influence on urban and community patterns With further attention given to the social phenomena and structural dynamics driving today's environmental problems the book concludes with an important reflection on truly sustainable solutions and what constitutes meaningful social change Each chapter in this interdisciplinary text follows a three part structure beginning with an overview of what is wrong and why This leads into a discussion on each issue's wide ranging implications and finally a balanced consideration of realistic solutions Featuring updated and expanded examples discussion points and coverage of recent developments including the US withdrawing from the Paris Agreement booming national economies and wealth distribution growing global interest in environmental justice with particular focus on the links between injustice and race and inequality climate change and renewable energy this new edition remains an essential companion for courses on environmental sociology and sustainability

Global Energy Dilemmas Mike Bradshaw, 2013-11-20 Today's global energy system faces two major challenges how to secure the supply of reliable and affordable energy and how to rapidly transform to a low carbon efficient and environmentally harmless energy supply In this rigorous and illuminating book Michael Bradshaw explores the key aspects of the current global energy dilemma and examines how it is playing out across the major regions and countries of the world The book begins by charting the development of the current global energy system exploring its key characteristics with a focus upon energy security and the relationship between energy economic development and climate change The next four chapters offer in depth analyses of four distinct global energy dilemmas in different parts of the world the challenge of sustaining affluence and decarbonising energy services in the high energy economies of the developed world the legacies of the centrally planned economy and the consequences of liberalisation in the post socialist world growing energy demand and emissions growth associated with the emerging regions and finally the quest to provide universal access to modern energy services in the developing world in a manner that is both economically and environmentally sustainable Identifying the governance structures and policy options available to tackle the global energy dilemma the book concludes that only an integrated approach sensitive to regional issues can reconcile the interests and needs of those facing differing energy challenges across the world today

Countdown Alan Weisman, 2013-09-24 A powerful investigation into the chances for humanity's future from the author of the bestseller *The World Without Us* In his bestselling book *The World Without Us* Alan Weisman considered how the Earth could heal and even refill empty niches if relieved of humanity's constant pressures Behind that groundbreaking thought experiment was his hope that we would be inspired to find a way to add humans back to this vision of a restored healthy planet only in harmony not mortal combat with the rest of nature But with a million more of us every 4 1 2 days on a planet that's not getting any bigger and with our exhaust overheating the atmosphere and altering the chemistry of the oceans prospects for a sustainable human future seem

ever more in doubt For this long awaited follow up book Weisman traveled to more than 20 countries to ask what experts agreed were probably the most important questions on Earth and also the hardest How many humans can the planet hold without capsizing How robust must the Earth s ecosystem be to assure our continued existence Can we know which other species are essential to our survival And how might we actually arrive at a stable optimum population and design an economy to allow genuine prosperity without endless growth Weisman visits an extraordinary range of the world s cultures religions nationalities tribes and political systems to learn what in their beliefs histories liturgies or current circumstances might suggest that sometimes it s in their own best interest to limit their growth The result is a landmark work of reporting devastating urgent and ultimately deeply hopeful By vividly detailing the burgeoning effects of our cumulative presence Countdown reveals what may be the fastest most acceptable practical and affordable way of returning our planet and our presence on it to balance Weisman again shows that he is one of the most provocative journalists at work today with a book whose message is so compelling that it will change how we see our lives and our destiny Climate Change Suhaib A. Bandh,2022-03-04 Beginning in the second half of the twentieth century the impacts of climate change have been fierce causing loss of human life and irreparable destruction to natural and man made infrastructure in many parts of the world The difference between climate change now and in the past is that of sudden and disproportionate disruption of the natural energy dynamics by the changing consumption patterns of billions of human beings who have polluted terrestrial and aquatic ecosystems The picture that emerges from the exhaustive analysis of international data drawn from the most reliable sources indicates that we have possibly gained access to the gateway of extinction and it is time that we take corrective steps immediately Global climate change is further altering our relationship with the environment modifying relatively stable climatic factors and making them uncertain unpredictable and threatening Changes in land use and an increasing demand for water resources due to climate change have affected the capacity of ecosystems to sustain food production ensure the supply of freshwater resources provide ecosystem services and promote rural multi functionality Ensuring food production does not just depend on increasing water efficiency promoting climate resilient crop production or reducing land use competition for urbanization but also on a more suitable and stable climate as the changes in climatic factors like precipitation temperature radiation evaporation and wind bring about some major shifts in global food supplies According to Special Report on Emission Scenarios SRES focused on greenhouse gas emissions projections and Representative Concentration Pathways RCPs conducted by the Intergovernmental Panel on Climate Change IPCC climate change increases the risk of simultaneous crop failures including corn rice legumes and vegetables if irrigation systems are not fully adapted to water stress situations A changing climate could have many adverse impacts on other sectors of our environment This book offers concrete up to date and appropriate study cum research material for students researchers academicians and policymakers It will be of a greater interest to students and researchers in the field of environmental science agriculture

science agronomy and sustainable development
