Building Materials For Design Construction And Engineering:

Construction and Building Sophie G. Doyle, 2010 The durability of a building construction material is defined as the ability of a product to maintain its required performance over a given or long time under the influence of foreseeable actions Therefore depending on the intended use of the product and its service conditions the durability can be a serious problem from both a technological and economic point of view Also discussed in this book is an experimental analysis of the behaviour of timber framed walls used as main bearing capacity elements in the construction of prefabricated timber structures The design of energy efficient buildings and the characterization of advanced structural materials by acoustic emission indices is also examined
