Aperture Synthesis Swapan Kumar Saha,2010-10-17 This book deals with the fundamentals of stellar interferometry with emphasis on aperture synthesis using sparse array of telescopes particularly at optical IR wavelengths the origin properties and optical effects of turbulence in the Earth's atmosphere techniques developed to overcome image degradation Studded with more than one hundred and fifty illustrations and tens of footnotes it addresses the basic tricks of trade current trend motivation methods and path to future promise of true interferometry both from the ground and space Also discussed are the technical challenge involved such as beam transportation and recombination detecting fringes using modern sensors and image synthesis Astronomical science that benefits from aperture synthesis imaging are highlighted as well

Self-Organized Surface Structures with Ultrafast White-Light Sebastian Uhlig,2015-04-28 Sebastian Uhlig presents the first experimental investigation of self organized surface structures LIPSS generated by ablation from different semiconductor and metallic targets with an ultrafast white light continuum WLC spreading in wavelength from 400 750 nm The main goal is to study the possibility of LIPSS formation upon irradiation with an incoherent and polychromatic light source e.g the WLC in order to discriminate between the two debated formation scenarios The generation of a suitable WLC in terms of sufficient white light pulse energy broad spectral bandwidth and low spatial coherence for the LIPSS generation as well as the characterization of this WLC are additional important objectives of this work

Sensors, Circuits, and Systems for Scientific Instruments Soumyajit Mandal,2025-07-11 *Sensors Circuits and Systems for Scientific Instruments Back Ends and Applications* delves into the advanced world of sensors and circuits tailored for precision measurements This text builds on foundational concepts from prior studies and focuses on the sophisticated processes in the later stages of measurement From data converters to digital signal processing and parameter estimation to machine learning this volume provides students with critical insights into testing verification and system integration through practical case studies involving various scientific instruments Designed for senior undergraduates and entry level graduate students in electrical and computer engineering applied physics and biomedical engineering this book bridges a gap between component focused texts and broad surveys offering a thorough understanding of back end systems and applications Develops a unified treatment of modern scientific instruments by combining knowledge of high performance sensors semiconductor devices circuits signal processing and embedded computing Focuses on fundamental concepts in precision sensing and interface circuitry accuracy precision linearity noise etc and their impact on system level performance Introduces readers to the indispensable role of signal detection theory pattern recognition and machine learning for modern scientific instrumentation Presents multiple case studies and examples to demonstrate how theoretical concepts are translated into real life measurement systems
