Quiz 1.1.4: Introduction to Physical Science

Key Terms:

Acceleration: The rate of change in the velocity of an object. In mathematical terms, acceleration equals change in velocity divided by change in time.

Area: A measure of the size of an object's surface.

Density: The amount of matter in a given space (volume). To calculate density, divide the mass of a substance by its volume.

Displacement: The length of the shortest path from start to finish, coupled with a direction.

Energy: The ability to cause change in matter. It is measured in Joules, or J. When energy is transferred to an object, that object will start to move.
