THE PERIODIC TABLE OF THE ELEMENTS

THE PERIODIC TABLE OF THE ELEMENTS

The periodic table of the elements (Figure 2.5) is a collection of atoms arranged based on their atomic number, which is the number of protons in the nucleus. Elements are arranged in rows and columns based on their chemical and physical properties. Elements in the same row (period) have similar chemical properties, while elements in the same column (group) have similar physical properties. The periodic table is divided into four main sections: s-block, p-block, d-block, and f-block. The s-block contains elements with one or two valence electrons, the p-block contains elements with three to six valence electrons, the d-block contains elements with seven to ten valence electrons, and the f-block contains elements with more than ten valence electrons. The periodic table is a fundamental tool for understanding the properties and behavior of elements.
