Digital Image Processing for Ophthalmology Faraz Oloumi, Rangaraj Rangayyan, Anna Ells, 2022-06-01 The monitoring of the effects of retinopathy on the visual system can be assisted by analyzing the vascular architecture of the retina This book presents methods based on Gabor filters to detect blood vessels in fundus images of the retina Forty images of the retina from the Digital Retinal Images for Vessel Extraction DRIVE database were used to evaluate the performance of the methods The results demonstrate high efficiency in the detection of blood vessels with an area under the receiver operating characteristic curve of 0.96 Monitoring the openness of the major temporal arcade MTA could facilitate improved diagnosis and optimized treatment of retinopathy This book presents methods for the detection and modeling of the MTA including the generalized Hough transform to detect parabolic forms Results obtained with 40 images of the DRIVE database compared with hand drawn traces of the MTA indicate a mean distance to the closest point of about 0.24mm This book illustrates applications of the methods mentioned above for the analysis of the effects of proliferative diabetic retinopathy and retinopathy of prematurity on retinal vascular architecture

Medical Image Processing Geoff Dougherty, 2011-07-25 The book is designed for end users in the field of digital imaging who wish to update their skills and understanding with the latest techniques in image analysis The book emphasizes the conceptual framework of image analysis and the effective use of image processing tools It uses applications in a variety of fields to demonstrate and consolidate both specific and general concepts and to build intuition insight and understanding Although the chapters are essentially self contained they reference other chapters to form an integrated whole Each chapter employs a pedagogical approach to ensure conceptual learning before introducing specific techniques and tricks of the trade The book concentrates on a number of current research applications and will present a detailed approach to each while emphasizing the applicability of techniques to other problems The field of topics is wide ranging from compressive non uniform sampling in MRI through automated retinal vessel analysis to 3 D ultrasound imaging and more The book is amply illustrated with figures and applicable medical images The reader will learn the techniques which experts in the field are currently employing and testing to solve particular research problems and how they may be applied to other problems

Advancements in digital technology continue to expand the image science field through the tools and techniques utilized to process two dimensional images and videos Image Processing Concepts Methodologies Tools and Applications presents a collection of research on this multidisciplinary field and the operation of multi dimensional signals with systems that range from simple digital circuits to computers This reference source is essential for researchers academics and students in the computer science computer vision and electrical engineering fields Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain big data is defined as any high volume high diversity biological clinical environmental and lifestyle information collected from single individuals to large cohorts in relation to their health and wellness status at one or several time points Such data is crucial because within it lies vast amounts of invaluable information that could potentially change a patient's life opening doors to alternate therapies drugs and diagnostic tools Signal Processing and Machine Learning for Biomedical Big Data thus discusses modalities the numerous ways in which this data is captured via sensors and various sample rates and dimensionalities Capturing analyzing storing and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools This book covers several of these aspects in two ways firstly through theoretical signal processing chapters where tools aimed at big data be it biomedical or otherwise are described and secondly through application driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data This text aimed at the curious researcher working in the field as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis It is the hope of Drs Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field thereby improving patient quality of life Provides an overview of recent state of the art signal processing and machine learning algorithms for biomedical big data including applications in the neuroimaging cardiac retinal genomic sleep patient outcome prediction critical care and rehabilitation domains Provides contributed chapters from world leaders in the fields of big data and signal processing covering topics such as data quality data compression statistical and graph signal processing techniques and deep learning and their applications within the biomedical sphere This book's material covers how expert domain knowledge can be used to advance signal processing and machine learning for biomedical big data applications Ophthalmological Imaging and Applications E.
