

Quantitative vs Algorithmic Trading

1.

Quantitative Trading (Quant)

- Complex Models & Statistics
- Analyze data to find opportunities
- Manual or Automatic Execution
- Strategies: Mean Reversion, Statistical Arbitrage

2.

Algorithmic Trading (Algo)

- Pre-set Rules & Automation
- Execute trades based on rules
- Simpler Models (Price Trends)
- Strategies: VWAP, TWAP, POV, Implementation Shortfall

3.

Choosing Between Them:

- Complexity: Quant (complex), Algo (simpler)
- Automation: Quant (variable), Algo (full automation)
- Goals: Quant (long-term returns), Algo (short-term gains)
- Resources: Quant (higher initial cost), Algo (lower cost)

4.

Data Analysis:

- Quant: Scrutinize large datasets, historical testing
- Algo: Big data, machine learning (sentiment analysis)

5.

Risk Management:

- Quant: Mathematical models (Monte Carlo simulations)
- Algo: Algorithmic oversight, technical methods

6.

Tools:

- Quant: EOD Historical Data, StrategyQuant, Python, C++
- Algo: Low latency software, Portfolio123 (backtesting), Quiver Quantitative

Automated Trading Strategies With Risk Cybernetics Algorithmic Quantitative Machine Learning Setups For Traders:

Automated-Trading Strategies with Risk-Cybernetics Lanz Chan, 2015-04-25 This book is not extensive by any means. There are many great books out there but this book is targeted at traders that seek inspiration for enhancing their trading methods. More importantly, this book is for anyone interested in trading as I have utilized mainly free software FxPro Quant and MT4. Hence anyone can read this book and learn from scratch to actually start trading with greater winning probabilities. Creating winning trading strategies is complex and hence automation is implemented but maintaining an automated system can be tedious and thus my endeavor to build a self-learning and enhancing system otherwise known technically as a cybernetic system. The process in creating this book has really helped me solidify my ideas and I sincerely hope for you as well.

Machine-Learning Fully Automated FX Trading System for Superior Returns with Risk Cybernetics Artificial Intelligence Framework Lanz Chan, 2017 The team at Finamatrix has shown through real trading accounts that it is possible to produce superior returns i.e. 100% on a weekly to monthly basis with manual trading. However, the sustainability of the superior returns are subject to the limitations of human thinking processes that are prone to mistakes due to emotions, cognitive errors, etc. The human brain of an experienced trader is able to harness all the data available and convert this data into useful information in a very short time for profit but this is not a perfect process. We attempt to develop the holy grail of trading systems: a completely self-learning and self-enhancing trading database system that learns from trader experience and is capable of a suite of functions including not only recalling and implementing strategies when suitable conditions arise but also capable of adaptation and self-improvement. The system is able to execute continuous iterations and is able to convert errors into learning experiences so as to re-program previous bad trades to create good trades. The system also features learning from good trades and is able to modify and re-input the parameters so as to offer relatively more appropriate trading strategies that are able to produce better returns. These functions are potentially made possible through the utilization of genetic optimization, neural networks in a risk cybernetics framework.

Book Description

It's now harder than ever to get a significant edge over competitors in terms of speed and efficiency when it comes to algorithmic trading. Relying on sophisticated trading signals, predictive models and strategies can make all the difference. This book will guide you through these aspects giving you insights into how modern electronic trading markets and participants operate. You'll start with an introduction to algorithmic trading along with setting up the environment required to perform the tasks in the book. You'll explore the key components of an algorithmic trading business and aspects you'll need to take into account before starting an automated trading project. Next you'll focus on designing, building and operating the components required for developing a practical and profitable algorithmic trading business. Later you'll learn how quantitative trading signals and strategies are developed and also implement and analyze sophisticated trading strategies such as volatility strategies, economic release strategies and statistical arbitrage. Finally you'll create a trading bot from scratch using the algorithms built in the previous sections. By the end of this book you'll be well versed with electronic trading markets and have learned to implement, evaluate and safely operate algorithmic trading strategies in live markets.

What you will learn

- Understand the components of modern algorithmic trading systems and strategies
- Apply machine learning in algorithmic trading signals and strategies using Python
- Build, visualize and analyze trading strategies based on mean reversion, trend, economic releases and more
- Quantify and build a risk management system for Python trading strategies
- Build a backtester to run simulated trading strategies for improving the performance of your trading bot
- Deploy and incorporate trading strategies in the live market to maintain and improve profitability

Who this book is for

This book is for software engineers, financial traders, data analysts and entrepreneurs. Anyone who wants to get started with algorithmic trading and understand how it works and learn the components of a trading system, protocols and algorithms required for black box and gray box trading and techniques for building a completely automated and profitable trading business will also find this book useful.
