Technology Assessment of Dual-Use ICTs Thea Riebe, 2023-06-30 Information and Communication Technologies ICTs are important to human national and even international security IT research artifacts and knowledge that can be applied in military and civilian

contexts used as part of weapon systems or cause significant harm are referred to as dual use. Advances in artificial intelligence, AI, robotics, cybersecurity, and open source intelligence (OSINT) raise questions about their dual use risks. But how can dual use of such disparate technologies be assessed? Case studies are still lacking on how to assess dual use ICT and how to enable sensitive and responsible dual use design. To address the research gap, this cumulative dissertation uses Technology Assessment (TA) as an epistemological framework to bring together approaches of Critical Security Studies (CSS) as well as Value Sensitive Design (VSD) from the field of Human Computer Interaction (HCI). As a result, the dissertation systematizes the dual use risks and scenarios of the selected ICTs and derives organizational and design implications.

Counterintelligence in a Cyber World Paul A. Watters, 2023-06-26 This book provides an outline of the major challenges and methodologies for applying classic counterintelligence theory into the cybersecurity domain. This book also covers operational security approaches to cyber alongside detailed descriptions of contemporary cybersecurity threats in the context of psychological and criminal profiling of cybercriminals. Following an analysis of the plethora of counterespionage techniques that can be mapped to the cyber realm, the mechanics of undertaking technical surveillance are reviewed. A range of approaches to web and forum surveillance are outlined as a virtual addition to traditional video and audio surveillance captured regarding targets. This includes a description of the advances in Artificial Intelligence predictive analysis support for the disciplines of digital forensics, behavioural analysis, and Open Source Intelligence (OSINT). The rise of disinformation and misinformation and the veracity of widespread false flag claims are discussed at length within the broader context of legal and ethical issues in cyber counterintelligence. This book is designed for professionals working in the intelligence, law enforcement, or cybersecurity domains to further explore and examine the contemporary intersection of these disciplines. Students studying cybersecurity, justice, law, intelligence, criminology, or related fields may also find the book useful as a reference volume, while instructors could utilise the whole volume or individual chapters as a secondary textbook or required reading.

National Forest Inventories of Latin America and the Caribbean Ramírez, C., Alberdi, I., Bahamondez, C., Freitas, J., 2022-06-24 National forest inventories (NFIs) are one of the main sources of forest information. This book describes the importance and history of NFIs in Latin America and the Caribbean, a region that is particularly relevant due to the extension and biodiversity of its forests. Methodologies for data collection and measurement of the most relevant indicators in 21 countries are addressed. In addition, similarities and differences in IFN designs, challenges and opportunities, and prospects for the future are examined. This analysis demonstrates that the information generated by the countries is diverse and must be harmonized to meet the commitments and opportunities for sustainable forest management in the 21st century. This publication represents a milestone in the beginning of the harmonization process towards data transparency within the forestry sector in Latin America and the Caribbean and constitutes the first collaborative effort of a network of NFI experts and collaborators in the region.
