

Solving Exponential Equations

This worksheet asks students to solve exponential equations by considering their bases. I like to do this before I talk about logarithms and then show them one that does not work and wonder what else could we do. This is also when I would discuss systems of exponential equations and solve them by graphing on a graphing calculator to check answers.

This worksheet goes with: Chapter 8 of the Prentice Hall Algebra 2 Book

This worksheet uses the following CCSS:

A-FNC.91 Explain why the x -coordinates of the points where the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$, find the solutions approximately e.g. using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic.

F-IF.8 Write a function defined by an expression in different but equivalent forms as needed and explain different properties of the function.

8. Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as $y = (1.05)^x$, $y = (0.97)^x$, $y = (1.07)^{5x}$, $y = (1.2)(0.7)^x$, and describe them as representing exponential growth or decay.
