Müller-Scheeßel, 2020-07-31 Archaeologists excavating burials often find that they are not the first to disturb the remains of the dead Graves from many periods frequently show signs that others have been digging and have moved or taken away parts of the original funerary assemblage Displaced bones and artefacts traces of pits and damage to tombs or coffins can all provide clues about post burial activities The last two decades have seen a rapid rise in interest in the study of post depositional practices in graves which has now developed into a new subfield within mortuary archaeology This follows a long tradition of neglect with disturbed graves previously regarded as interesting only to the degree they revealed evidence of the original funerary deposit This book explores past human interactions with mortuary deposits delving into the different ways graves and human remains were approached by people in the past and the reasons that led to such encounters The primary focus of the volume is on cases of unexpected interference with individual graves soon after burial re encounters with human remains not anticipated by those who performed the funerary rites and constructed the tombs However a first step is always to distinguish these from natural and accidental processes and methodological approaches are a major theme of discussion Interactions with the remains of the dead are explored in eleven chapters ranging from the New Kingdom of Egypt to Viking Age Norway and from Bronze Age Slovakia to the ancient Maya Each discusses cases of re entries into graves including desecration tomb re use destruction of grave contents as well as the removal of artefacts and human remains for reasons from material gain to commemoration symbolic appropriation ancestral rites political chicanery and retrieval of relics The introduction presents many of the methodological issues which recur throughout the contributions as this is a developing area with new approaches being applied to analyze post depositional processes in graves Human Remains: Another Dimension Tim Thompson, David Errickson, 2017-02-16 Human Remains Another Dimension The Application of 3D Imaging in the Funerary Context brings together scattered literature on the topic assimilating disparate pieces that relate to the novel use of non invasive three dimensional imaging techniques in the forensic context All chapters are written by

Extracting Spatial Information from Historical Maps Benedikt Budig, 2018-11-23 Historical maps are fascinating documents and a valuable source of information for scientists of various disciplines Many of these maps are available as scanned bitmap images but in order to make them searchable in useful ways a structured representation of the contained information is desirable This book deals with the extraction of spatial information from historical maps This cannot be expected to be solved fully automatically since it involves difficult semantics but is also too tedious to be done manually at scale The methodology used in this book combines the strengths of both computers and humans it describes efficient algorithms to largely automate information extraction tasks and pairs these algorithms with smart user interactions to handle what is not understood by the algorithm The effectiveness of this approach is shown for various kinds of spatial documents from the 16th to the early 20th century
