Representation Theory and Higher Algebraic K-Theory Aderemi Kuku, 2016-04-19 Representation Theory and Higher Algebraic K Theory is the first book to present higher algebraic K theory of orders and group rings as well as characterize higher algebraic K theory as Mackey functors that lead to equivariant higher algebraic K theory and their relative generalizations Thus this book makes computations of higher K theory of groups *Scientific and Technical Aerospace Reports*, 1968 **Handbook of Algebra** M. Hazewinkel, 2000-04-06 Handbook of Algebra **Homological Algebra: In Strongly Non-abelian Settings** Marco Grandis, 2013-01-11 We propose here a study of semiexact and homological categories as a basis for a generalised homological algebra Our aim is to extend the homological notions to deeply non-abelian situations where satellites and spectral sequences can still be studied This is a sequel of a book on Homological Algebra The interplay of homology with distributive lattices and orthodox semigroups published by the same Editor but can

be read independently of the latter The previous book develops homological algebra in p -exact categories i.e exact categories in the sense of Puppe and Mitchell a moderate generalisation of abelian categories that is nevertheless crucial for a theory of coherence and universal models of even abelian homological algebra The main motivation of the present much wider extension is that the exact sequences or spectral sequences produced by unstable homotopy theory cannot be dealt with in the previous framework According to the present definitions a semiexact category is a category equipped with an ideal of null morphisms and provided with kernels and cokernels with respect to this ideal A homological category satisfies some further conditions that allow the construction of subquotients and induced morphisms in particular the homology of a chain complex or the spectral sequence of an exact couple Extending abelian categories and also the p -exact ones these notions include the usual domains of homology and homotopy theories e.g the category of pairs of topological spaces or groups they also include their codomains since the sequences of homotopy objects for a pair of pointed spaces or a fibration can be viewed as exact sequences in a homological category whose objects are actions of groups on pointed sets
