New . . . from Barber-Colman **No. 3-2 Rolling Machine**

All the benefits of rolling . . . speed, long tool life, stronger produced parts with finer finish and greater hardness, excellent part-to-part duplication, and, especially important, the accuracy which finish rolling can impart to hobbed gears . . . all these are provided in the new Barber-Colman No. 3-2 rolling machine.

A machine for rolling splines and spiral forms from the solid, and for finish rolling gears, No. 3-2 operates by means of two opposed hydraulic cylinders which drive rotating cylindrical dies into the workpiece under heavy pressure, imparting the desired form. Gradual infeeding is provided by a cam interposed between the two die spindle carriages which, for maximum flexibility, is independently controlled. The work blank may be driven in an indexed relationship to the die spindles. A unique oscillating motion has been provided whereby the piece is rolled alternately in both directions to produce more symmetrical teeth.

With the No. 3-2, the workpiece is held rock-steady on centers, not in bushings. And No. 3-2 is versatile. It can finish roll either spur or helical gear forms, and can roll either solid or hollow stock. Cycling is fully automatic; loading and unloading can be automated for any given part. Construction features include precision drive to die and work spindles, adjustable back-lash take-up, re-circulating way bearings, fully automatic lubrication, constant-load spindle braking which keeps out "slack" for greater accuracy.
