Beyond Significance Testing Rex B. Kline, 2013 Traditional education in statistics that emphasises significance testing leaves researchers and students ill prepared to understand what their results really mean Specifically most researchers and students who do not have strong quantitative backgrounds have difficulty understanding outcomes of statistical tests As more and more people become aware of this problem the emphasis on statistical significance in the reporting of results is declining Increasingly researchers are expected to describe the magnitudes and precisions of their findings and also their practical theoretical or clinical significance This accessibly written book reviews the controversy about significance testing which has now crossed various disciplines as diverse as psychology ecology commerce education and biology among others It also introduces readers to alternative methods especially effect size estimation at both the group and case levels and interval estimation confidence intervals in comparative studies Basics of bootstrapping and Bayesian estimation are also considered Research examples from substance abuse education learning and other areas illustrate how to apply these methods A companion website promotes learning by providing chapter exercises and sample answers downloadable raw data files for many research examples and links to other useful websites New to this edition is coverage of robust statistical methods for parameter estimation effect size estimation and interval estimation A new chapter covers the logic and illogic of significance testing This edition also addresses recent developments such as the new requirements of some journals for the reporting of effect sizes

Innovative Measurement and Evaluation of Community Development Practices Norman Walzer,Jane Leonard,Mary Emery,2017-10-02 Finding innovative and useful measurement practices for community development projects is gaining in importance as policymakers increase the demands for accountability This book examines

some of the latest efforts to document the effectiveness of local development efforts. The types of documentation differ by types of project jurisdiction and country but they have a common focus of recognizing the importance of the Community Capitals framework. Public agencies in the past have often measured development successes by the number of jobs created and or amount of private investment forthcoming. However the impacts of community development reach much deeper than those indicators. Strengthening local decision making capacity is a common component of development efforts as is engaging populations that in the past have not been active in decision making. These and other considerations are explored in more detail by authors in this volume. Local policymakers and practitioners will be continually pressured to provide more documentation of outcomes and readers will gain considerable insights into alternative approaches that can be included in projects but can also see the common elements needed to create a solid measurement system. International insights are a special strength of the discussions in this book. This book was published as a special issue of Community Development.
